1. Executive Summary

This report presents a comprehensive SEO audit of **www.evergreencleaningservice.ca** for a **local service-area business (B2B commercial, office and janitorial cleaning; one Toronto office at 243 Queen St W serving the GTA since 1989; audited by 10XiD on 2026-10-28; score = Technical 84 x 22% + Content 43 x 23% + On-Page 68 x 20% + Schema 74 x 10% + Performance 80 x 10% + AI Readiness 60 x 10% + Images 61 x 5% = 66.42)** site, generated on October 28, 2026. Findings combine technical, content, schema, performance, visual, and search-readiness evidence as available.

66/100

SEO HEALTH SCORE

Critical Issues Found:

1. **Critical:** Nothing is measurable: no GA4, no GTM funnel triggers, no Search Console access, Ads conversion settings unverified, staging hits reach the live Ads tag
2. **Critical:** Location pages fail the uniqueness gate: 0 of 7 pass 60%; Brampton, Etobicoke, Markham, Oakville and Toronto-downtown are 4-6% unique after city normalisation
3. **Critical:** Google Business Profile is thin and at risk: shared serviced-office address, 10 reviews (JAN-PRO GTA 786), 2 photos, no posts, absent from all four local-pack samples
4. **High:** Proof and E-E-A-T have collapsed (Content Quality 43/100): AI-looking imagery captioned as 'cleaning results', /reviews/ has no reviews, About is 170 anonymous words, blog unposted since 2023-03-31 with no dates or authors
5. **High:** Split entity and stale citations: 'Evergreen Office Cleaning' vs 'Evergreen Cleaning Service(s)', old address on MapQuest, old phone on WhatsYourHours, 1989 vs 1990, name collision with evergreencleaningservices.org

Quick Wins:

1. noindex, follow on /search/ and remove it from the sitemap; drop /insights/page/2-4/ from the sitemap; add real <lastmod> via the @astrojs/sitemap serialize hook (about 1 hour; findings/technical.md #2-3, findings/sitemap.md 2.1)
2. Ship the security-header block in public/_headers: HSTS (no preload yet), X-Content-Type-Options nosniff, Referrer-Policy strict-origin-when-cross-origin, Permissions-Policy, X-Frame-Options SAMEORIGIN, CSP report-only first (30 minutes plus CSP tuning; findings/technical.md #1)
3. Remove the competitor link in /ask-the-office-cleaners-cleaning-break-rooms/; fix 'psychically' and the COVID framing on /services/disinfection-cleaning/; drop '| Evergreen Office Cleaning' from the 7 location H1s; retitle /services/ so it stops competing with /services/commercial-cleaning/ (about 2 hours; findings/content.md, findings/sxo.md section 7)
4. Schema entity pass: alternateName, foundingDate 1989, geo set to the GBP pin 43.65019 / -79.38856, hasMap, ImageObject logo, contactPoint; BreadcrumbList on the 7 templates that lack it (2-4 hours; findings/schema.md sections 4-5a; findings/local.md section 4)
5. Image and media hygiene: alt text on the 19 empty-alt images (hero, 3 home cards, 13 thumbnails), og:image:width/height/alt and twitter:image:alt in the layout, stop the 2.5 MB /video/lead-net.mp4 auto-download and give /video/* a 30-day cache header (about 3 hours; findings/images.md sections 4 and 7; findings/performance.md fix 2)

2. Audit Categories

2.1 Technical SEO

Score: 84/100

What Works

- Closed, clean crawl graph: 111/111 URLs return 200, 0 broken or redirecting internal link targets, 0 duplicate titles or descriptions, exactly one H1 and a self-referencing canonical on every page
- Indexation hygiene: sitemap lists only 200, indexable, canonical URLs; 38 tag/category archives, /thank-you/, 404 and all 4 /lp/* paid pages are noindex and out of the sitemap; real 404s with no soft-404s; 154 legacy WordPress redirects all 301 in one hop
- Fully server-rendered Astro build: 0 words appear only after JS; HTML about 26 KB Brotli from the Cloudflare edge; HTTP/2 with h3 advertised; immutable fingerprinted assets; preloaded self-hosted fonts; inlined CSS
- Correct host and protocol redirects (apex to www, http to https, 301, 1 hop); consistent trailing slashes; lang en-CA with og:locale en_CA; hreflang correctly absent on a single-language site

Findings

No security headers on any HTML response High

No Strict-Transport-Security, Content-Security-Policy, X-Content-Type-Options, Referrer-Policy, X-Frame-Options or Permissions-Policy on HTML (img.* host and /admin/ routes do send them). Evidence: curl -D - https://www.evergreencleaningservice.ca/. Not a direct ranking factor; a trust and best-practice gap.

Recommendation: Add a /* block to public/_headers with HSTS (no preload until all subdomains are confirmed HTTPS), nosniff, strict-origin-when-cross-origin, Permissions-Policy and SAMEORIGIN; add a report-only CSP allowing GTM, Google Ads, doubleclick, gstatic, Cloudflare Insights, Trustindex and img.*, then enforce.

/search/ is indexable, listed in the sitemap and an orphan Medium

https://www.evergreencleaningservice.ca/search/ has no robots meta, 0 internal inlinks, 1 word of content and sits in sitemap-0.xml.

Recommendation: Add meta robots noindex, follow on the search template and exclude /search/ in the astro.config.mjs sitemap filter.

Sitemap has no <lastmod>; pagination pages included; single flat file Medium

0 of 73 URLs in https://www.evergreencleaningservice.ca/sitemap-0.xml carry lastmod, while the Worker's injectSitemap adds lastmod only for admin posts; /insights/page/2-4/ are listed; no type split for Search Console diagnostics.

Recommendation: Set lastmod from real content dates (git date of the page's data file, post pubDate/updatedDate) in the serialize hook, never build time; remove pagination from the sitemap but keep it crawlable; split into pages, services, industries, locations and insights sitemaps under the index and point the Worker's LIST_PATHS at sitemap-insights.xml.

Slash-less URLs redirect with 307, not 301 Medium

curl -I https://www.evergreencleaningservice.ca/about-us returns HTTP/2 307 to /about-us/ (Cloudflare Workers static-assets html_handling). All internal links are slashed, so the impact is limited to external and legacy links.

Recommendation: Add explicit 301/308 rules for known legacy slash-less URLs in _redirects or the Worker, or adjust the Cloudflare html_handling setting.

Core Web Vitals not verified with Lighthouse/PSI or CrUX Medium

PageSpeed Insights API returned HTTP 429 (quota, no key) and CrUX HTTP 403 (anonymous). Only lab data exists (findings/performance.md).

Recommendation: Re-run PSI with PSI_API_KEY for / and /services/office-cleaning/ on mobile; read CrUX once Search Console is verified.

Third-party script weight on every page Medium

gtm.js (GTM-5W69BTJQ) 157 KB plus gtag/js for Google Ads AW-18472921801 168 KB plus doubleclick, googleadservices, call tracking and Cloudflare Insights: about 610 KB over 30 requests on https://www.evergreencleaningservice.ca/. GTM and gtag are over half of the transfer.

Recommendation: See Performance: consolidate to one Google tag and consider loading GTM after first interaction or on an idle timer, with the ads owner deciding the measurement trade-off.

Title and description length Low

5 titles over 60 chars (/locations/mississauga/ 72, /locations/vaughan/ 69, /services/commercial-cleaning/ 61, two posts 61); several legacy titles lack geo or B2B intent (/services/graffiti-removal/ 'Graffiti Removal - Evergreen Office Cleaning', /insights/ 'News - ...'); 13 descriptions over about 160 chars (/services/pressure-washing/ 166).

Recommendation: Trim titles to 50-60 keeping 'Toronto' in service titles; trim descriptions to 150-158 and add a CTA verb.

Images without width/height and heavy tag-page linking Low

130 of 503 <img> tags lack explicit dimensions (lab CLS 0.017); 49 of 73 pages link to all 26 noindex tag pages; Trustindex widget emits repeated inline SVG <title> elements on the homepage.

Recommendation: Add dimensions (see Images); cap the sidebar tag list to 5-8; aria-hidden or remove the SVG titles.

IndexNow not set up; /llms.txt 404; robots.txt allows all AI crawlers Low

https://www.evergreencleaningservice.ca/robots.txt is User-agent: * / Allow: /; no IndexNow key probed; /llms.txt returns 404.

Recommendation: Decide the AI crawler policy deliberately; add a Bing Webmaster Tools property and IndexNow key; optionally publish a curated llms.txt.

2.2 Content Quality

Score: 43/100

What Works

- Rebuilt core pages (/services/office-cleaning/, /services/commercial-cleaning/, /services/building-maintenance/, /services/post-construction-cleaning/, both industry pages, /our-process/) have intent-matched H1s, scope and limits, price-factor lists and 3-7 FAQs with FAQPage schema; they beat JAN-PRO on FAQs, readability (grade 7.7-8.6 vs 12.1-12.4) and transparency
- Consistent, specific trust facts: since 1989, full NAP and hours, WSIB covered, bonded and insured, honest single-office statements on every location page, strong scope sentences on the clinic page
- Readable copy (Flesch-Kincaid grade about 8-9) and hand-written, non-templated metadata (templated ratio 0.0, no duplicate titles or descriptions)

Findings

Location pages are 94-97% boilerplate High

https://www.evergreencleaningservice.ca/locations/brampton/, /etobicoke/, /markham/, /oakville/ and /toronto-downtown/ have 21-42 unique words after city normalisation; pairwise 6-gram Jaccard 0.76-0.88; Mississauga and Vaughan about 72% boilerplate. Only one facility-type sentence, an 'office in X?' FAQ and the H1 differ.

Recommendation: Add 250-400 words of genuinely local substance per page (named districts, building types actually served, a local client quote, dispatch logistics from Queen St W, a local photo) or consolidate the five near-identical pages into /locations/ with 301s. Do not add pages for the remaining areaServed cities on the current template.

Site imagery appears AI-generated and is presented as cleaning results High

Every sampled image (hero, gallery, dental, night crew, condo lobby, blog features) shows AI tells: recurring identical models, the CN Tower behind every interior, a cleaner in clinical scrubs; metadata stripped. https://

www.evergreencleaningservice.ca/cleaning-demo-gallery/ is 13 images and 3 words with alt text 'cleaning results' and typos in its meta.

Recommendation: Replace with real crew and site photos at minimum on the home hero, gallery and clinic page; if any generated image stays, do not caption it as results; retitle or remove the gallery until real photos exist.

/reviews/ contains no reviews High

https://www.evergreencleaningservice.ca/reviews/ is titled 'Testimonials', its meta promises 'real Google reviews', and the page is a 35-word submission form with zero reviews.

Recommendation: Embed the actual Google reviews with dates and the testimonials with company names (with permission); keep the form below; request new reviews, since the newest shown are about 5 years old.

About page thin and anonymous High

https://www.evergreencleaningservice.ca/about-us/ is 170 words with no owner or founder name (reviews mention 'Art'), no team, no photos, no WSIB or insurance evidence and no history beyond 'since 1989'. Weakest E-E-A-T page.

Recommendation: Rebuild to 600-900 words: name the owner, operations lead and account executives with photos; company history 1989 to today including the rename; verifiable numbers; WSIB clearance process, insurer and liability limit; Person and AboutPage schema.

Blog stale, undated and unattributed High

38 posts under https://www.evergreencleaningservice.ca/insights/, newest 2023-03-31; no visible date or byline; BlogPosting author is the Organization; dateModified equals datePublished on every post; zero list markup; 26 of 38 posts link to no service, industry or location page.

Recommendation: Visible publish and last-reviewed dates, a named Person author with bio, real lists and tables, 2-3 contextual links per post to money pages, Canadian sources; prune, merge and refresh to about 22 URLs per the plan in findings/content.md section 7 after checking GSC clicks and backlinks.

9 COVID-era posts plus a COVID-framed money page Medium

https://www.evergreencleaningservice.ca/services/disinfection-cleaning/ still reads 'Are You Concerned About Covid-19 In Your Office' with typos ('psychically', 'everything is clean with plain detergent'); 9 posts from 2020-2022 carry outbreak framing.

Recommendation: Rewrite the disinfection page as electrostatic/touch-point disinfection on the office-cleaning template; 301 or merge the COVID posts into it; 410 only where there is no traffic and no links.

Blog links to a Toronto competitor with a keyword anchor Medium

https://www.evergreencleaningservice.ca/ask-the-office-cleaners-cleaning-break-rooms/ links to https://www.greencleanofficemaintenance.com/ with the followed anchor 'Toronto office cleaners'.

Recommendation: Remove the link.

Legacy service pages thin, inconsistent or erroneous Medium

/services/graffiti-removal/ 167 unique words, /services/pressure-washing/ 200, /services/industrial-cleaning/ 234 (lists retail, banks, golf clubs, campgrounds, casinos), /services/emergency-cleaning/ 310 with a 22-place service area that contradicts the 10-city schema and /locations/ list.

Recommendation: Rebuild on the office-cleaning template with FAQs, scope and price factors; use the 10-city service-area list everywhere; back or remove 'airports, casinos, hospitals' claims.

Industry and service coverage gap vs JAN-PRO Medium

2 industry pages vs JAN-PRO's 16 (25 URLs in its industries sitemap); no janitorial, carpet, floor care, day porter, window, dental-only, retail, education, warehouse, government or bank pages; the /industries/ hub lists 7 segments and links 2. /industries/property-management/ vs /services/building-maintenance/ TF-IDF similarity 0.58.

Recommendation: Build per the 12-page priority list in findings/clusters.md section 7 and the six briefs in briefs/, evidence-gated; differentiate building maintenance (periodic floor and surface programme) from property management (portfolio, tenant, condo relationship).

Price factors but no ranges; blog structure; unsupported claims; thin hubs Low

No price figure anywhere while competitors anchor $225-$500/month; the blog has zero ul/ol and 10 posts jump H1 to H3; 'certified' and 'health-grade sanitization' on /locations/mississauga/ are unsupported; /services/ (178 unique words), /industries/ (104) and /locations/ (46) are card-only hubs.

Recommendation: Publish a Toronto pricing guide with honest ranges once the client approves (intake A7); convert checklists to lists and tables; evidence or remove claims; add 100-200 word intros and selection guidance to each hub.

2.3 On-Page SEO

Score: 68/100

What Works

- Titles and descriptions present on 111/111 pages with 0 duplicates and 0 templated pairs; the two deep-dived pages score 85 and 88 on on-page fundamentals (56-57 char keyword-first titles, matching H1, self-canonical, complete OG/Twitter)
- Exactly one H1 on every page; core service and industry pages target '[service] in Toronto and the GTA' in both title and H1 with a clean H2/H3 outline that reads like a buyer's checklist (who it is for, inclusions, scope and limits, price factors, FAQ)
- Page types match the SERP for most queries: service, vertical and city pages exist where the SERP rewards them; no two service pages share a primary keyword (office vs commercial overlap only 3)
- Closed internal-link graph with 0 broken links; hubs link all spokes; every service page links all 7 location pages; descriptive anchors on service, industry and location links; consistent 'free quote / walkthrough' CTA wording

Findings

Toronto head-term cannibalisation across four URLs High

https://www.evergreencleaningservice.ca/, /services/ (title 'Commercial Cleaning Services in Toronto'), /services/commercial-cleaning/ and /locations/toronto-downtown/ all target 'commercial cleaning toronto'; the downtown H1 also carries '| Evergreen Office Cleaning'. SERP for this query is 8/9 homepages.

Recommendation: Homepage owns 'commercial cleaning toronto / services toronto'; retitle /services/ to 'All Cleaning Services | Evergreen' with a non-competing H1; grow /services/commercial-cleaning/ into the pillar 'Commercial Cleaning & Janitorial Services in Toronto' (2,500-3,000 words); downtown page targets 'office cleaning downtown Toronto'.

No janitorial services page; homepage 'Janitorial Services' card links to office cleaning High

'janitorial services toronto' is a distinct high-intent SERP (janitorial-branded homepages and service pages). findings/sxo.md and briefs/janitorial-services.md propose /services/janitorial-services/; findings/clusters.md measures 4-5 SERP overlap with office and commercial and recommends janitorial as the pillar's secondary target first.

Recommendation: Fold the janitorial brief into the commercial-cleaning pillar now, repoint the homepage card, and decide on a standalone page after 60 days of Search Console query data.

Location H1s are the title string with brand suffix; no CTA or phone in the fold Medium

https://www.evergreencleaningservice.ca/locations/toronto-downtown/ renders a 4-line ALL-CAPS H1 'COMMERCIAL CLEANING IN DOWNTOWN TORONTO | EVERGREEN OFFICE CLEANING'; all 7 location pages carry the suffix; the only template without a hero CTA.

Recommendation: Title-case H1 without the suffix ('Commercial Cleaning in Downtown Toronto'); hero CTAs and phone in the fold; later rename /locations/toronto-downtown/ to /locations/toronto/ with a 301.

Legacy H1s are bare labels; /insights/ is 'News'; /reviews/ mismatches its intent Medium

'Disinfection Cleaning', 'Industrial Cleaning', 'Pressure Washing', 'Graffiti Removal' lack the geo modifier their titles carry; https://www.evergreencleaningservice.ca/insights/ H1 is 'News'; /reviews/ promises reviews and delivers a form; /services/industrial-cleaning/ body lists retail, banks and golf clubs.

Recommendation: Add 'in Toronto' to legacy H1s; rename the blog hub 'Commercial Cleaning Insights'; fix /reviews/ and the industrial audience list.

Target phrases never verbatim; card-style rather than contextual internal links; blog under-linked Medium

'office cleaning toronto' and 'commercial cleaning toronto' appear 0 times verbatim in body copy on the pages that target them; related links are cards, not in-sentence anchors (JAN-PRO's pattern); 26 of 38 posts link to no money page and most posts have exactly 1 inlink; 3 image-only blog teaser links on the homepage have no anchor text.

Recommendation: One natural sentence per phrase; in-sentence anchors per the matrix in findings/clusters.md section 6 ('strip, seal and wax' to building maintenance); 2-3 contextual links per post; post titles as teaser link text.

Blog topic clashes Medium

4 seasonal checklists, 5 COVID posts, 2 germ-hotspot posts, 3 air-quality posts, 3 cleaning-method posts, 2 hand-hygiene posts, 2 choosing-a-cleaner posts; /benefits-of-regular-commercial-cleaning-services/ competes with the pillar.

Recommendation: Consolidate to about 21 posts per findings/clusters.md section 5; check GSC clicks and backlinks before any 301.

Title/description length and missing twitter:site Low

5 titles over 60 chars, 13 descriptions over 160, no CTA verb on the two best pages, no twitter:site (@EvergreenClean8); footer column H2s dilute the outline.

Recommendation: Use the rewrites in findings/page-home.md section 8 and findings/page-office-cleaning.md section 8; demote footer headings.

2.4 Schema & Structured Data

Score: 74/100

What Works

- One CleaningService entity (#organization) on every page with full NAP, GeoCoordinates, 7-day OpeningHoursSpecification, 10 City areaServed, hasOfferCatalog and sameAs; no duplicate Organization node; consistent @id graph; all 38 JSON-LD blocks parse
- Service + BreadcrumbList + FAQPage on service and industry pages with FAQ text matching the visible page; BlogPosting and CollectionPage reference the organisation by @id
- Policy-safe: no aggregateRating, no per-city LocalBusiness nodes (the Mississauga FAQ states there is no office there), no deprecated HowTo; FAQPage correctly treated as legacy after Google retired FAQ rich results on 2026-05-07
- Ahead of JAN-PRO on local-business data; JAN-PRO's markup has & inside JSON strings and string breadcrumb positions

Findings

Name inconsistency with no alternateName Medium

Schema name is 'Evergreen Office Cleaning' everywhere, but the logo alt, social slugs, reviewer text and domain say 'Evergreen Cleaning Service'; no alternateName, legalName or foundingDate although 1989 is claimed six times on the homepage.

Recommendation: Add alternateName ['Evergreen Cleaning Service', 'Evergreen Cleaning Services'], legalName if different and foundingDate '1989' to the site-wide CleaningService node (ready-to-paste JSON in findings/schema.md 5a).

BreadcrumbList missing on 7 templates Medium

Absent on https://www.evergreencleaningservice.ca/services/, /locations/, /locations/mississauga/ (and other city pages), /about-us/, /reviews/, /contact-us/, /request-a-quote/.

Recommendation: Add BreadcrumbList per findings/schema.md 5c; on posts route the breadcrumb through /insights/ instead of the noindex /category/blog/.

Blog dates are CMS placeholders and not visible on page Medium

dateModified equals datePublished and both end in T00:00:00.000Z on every post (e.g. https://www.evergreencleaningservice.ca/cleaning-check-list-dental-clinics/); no <time> or byline on the page; author is the Organization.

Recommendation: Real ISO 8601 timestamps with the Toronto offset, a visible 'Published / Updated' line, a named Person author; update dateModified only on substantive edits.

Logo, image and geo quality Low

logo is a plain string pointing at an 884x265 banner JPEG and image is the same banner; GeoCoordinates 43.6503, -79.3892 are about 53 m from the GBP pin at 4 decimals; BlogPosting image is 960x480.

Recommendation: ImageObject logo (square PNG at least 112 px), real photo image arrays in 16:9, 4:3 and 1:1 at 1200 px or wider, geo 43.65019 / -79.38856, hasMap with the Maps URL.

Entity graph gaps Low

areaServed list repeated on every Service node with no containedInPlace; hasOfferCatalog items have no url and are not tied to page-level Service nodes (which lack @id); 'Industrial & Warehouse Floor Scrubbing' has no page; no WebPage nodes with dateModified; no contactPoint, knowsAbout, audience, availableChannel or AboutPage/ContactPage; SearchAction has no Google benefit since 2024.

Recommendation: Give each page-level Service an @id (.../#service) and reference it from the catalog with url; add WebPage nodes with dateModified and primaryImageOfPage; add contactPoint, BusinessAudience and a ServiceChannel pointing at /request-a-quote/; keep or drop SearchAction; validate in the Rich Results Test and validator.schema.org before shipping.

2.5 Performance

Score: 80/100

What Works

- The 15 Oct optimisation landed: reCAPTCHA loads only on form intent (0 requests before focus, 11 after), 0 render-blocking resources with CSS inlined, /_astro/* immutable 1-year cache, fonts 30 days, mobile page weight 0.49-0.70 MB, CLS 0 on home, service and paid pages
- Mobile LCP under 1.7 s in the lab on every page; text-LCP service and location pages at about 0.6 s; desktop LCP under 0.6 s and TBT under 40 ms everywhere; hero is a 23 KB art-directed AVIF with fetchpriority high
- Versus jan-pro.ca/en/ (the Toronto competitor): about a quarter of the mobile TBT (442 vs 2,009 ms), a third of the requests, half the weight, no render-blocking files

Findings

Google tag stack costs 440-590 ms of mobile TBT and 0.3-0.55 s of mobile LCP on every page High

gtm.js (GTM-5W69BTJQ) 153 KB plus gtag/js?id=AW-18472921801 164 KB plus doubleclick and call-tracking. Blocking googletagmanager hosts takes homepage TBT from 531-886 ms to 0-4 ms (measured). Browserless Lighthouse mobile: homepage 63 (LCP 4.6 s, TBT 840 ms), office page 84 (TBT 500 ms). The site's own JS contributes essentially nothing. Lab data only: PSI 429, CrUX 403, INP not measured.

Recommendation: Audit the container for unused tags; send GA4 and Ads through one Google tag; consider loading GTM after first interaction or a 3-4 s idle timer (the call-tracking number swap and non-interacting page views are the trade-off, so the ads owner decides); not Partytown because call tracking needs document access; re-run PSI with an API key.

2.5 MB video downloaded on every page view High

https://www.evergreencleaningservice.ca/video/lead-net.mp4 (2,533,009 bytes, Cache-Control max-age=0, must-revalidate) starts downloading about 3 s after load on every page that renders the chat/video bubble; the code comment in src/components/LeadVideo.astro says '40KB+'. Desktop page weight 3.1 MB vs 0.64 MB without it.

Recommendation: Load the video on click of the bubble or compress it under 500 KB with a poster image; add /video/* with Cache-Control public, max-age=2592000 to public/_headers; fix the comment.

Homepage hero LCP path and paid-page hero source Medium

The 24 KB mobile hero takes 1.1-1.4 s to load under throttling: a new TLS connection to img.evergreencleaningservice.ca plus bandwidth contention with the tags; the image request is issued about 200 ms after the HTML starts. /lp/office-cleaning/ loads the 1600w AVIF (45 KB) on a 390 px viewport.

Recommendation: Add <link rel=preload as=image imagesrcset fetchpriority=high> at the top of head; consider serving images through the www origin; use the 640x800 mobile source on the paid page.

Font-swap layout shift on location pages Medium

CLS 0.033-0.034 on mobile https://www.evergreencleaningservice.ca/locations/mississauga/ (P.loc-lead, an H2 and UL.loc-detail shift); blocking /fonts/ removed it in 2 of 2 runs.

Recommendation: Metric-matched fallback fonts (size-adjust, ascent-override) for Open Sans and Raleway, or font-display optional for body text.

Italic font, image cache lifetime, redundant beacon Low

open-sans-italic.woff2 (50 KB) is fetched at VeryHigh priority on every page; img.evergreencleaningservice.ca serves max-age=86400; Cloudflare Web Analytics (11 KB) duplicates GA4 once it exists; a DoubleClick third-party cookie drops Lighthouse best-practices to 77.

Recommendation: Subset or lazy-load the italic; raise the B2 image cache to 2592000 in scripts/b2-sync.mjs; drop the beacon after GA4 is live.

2.6 Images

Score: 61/100

What Works

- 0 missing alt attributes and 20 well-written descriptive alts (45-90 chars) on body photos
- Hero, logo, cards and post feature images are exemplary: AVIF/WebP picture elements, srcset and sizes, fetchpriority high, 23-45 KB LCP image, Cloudflare-fronted B2 CDN with preconnect

- 21/21 pages have og:image and twitter:card summary_large_image, all exactly 1200x630 JPEG at 63-149 KB, page-specific on services, industries and posts; nothing over 200 KB; complete favicon set; descriptive hyphenated filenames

Findings

8 of 21 money pages have no photograph at all High

https://www.evergreencleaningservice.ca/services/building-maintenance/, /services/graffiti-removal/, /services/post-construction-cleaning/, /services/pressure-washing/, /industries/property-management/, /locations/toronto-downtown/, /locations/mississauga/ and /about-us/ render only the header logo (no img, no CSS backgrounds). Their existing OG photos are not used on the page. Specialist labelled Critical; High under the skill's definitions.

Recommendation: Add at least the page's OG photo as an in-page figure with a descriptive, location-aware alt; ideally a real service-specific photo per page from the photoshoot.

Body photos are unoptimised plain JPEGs High

16 unique 1200x800 JPEGs in 36 placements inside <p> tags with no picture, srcset, sizes, width or height; 75-127 KB each; about 1.2 MB of the 1.64 MB unique image payload, even though -768.avif variants already exist on the CDN for some (e.g. office-backpack-vacuum-toronto.jpg 116 KB on https://www.evergreencleaningservice.ca/services/office-cleaning/). Specialist labelled Critical; High under the skill's definitions.

Recommendation: Build one ResponsiveImage component (AVIF+WebP+JPEG, 480/800/1200/1600w, sizes '(min-width: 992px) 790px, 100vw', width 1200 height 800, decoding async, lazy only below the fold) and use it for every body image; estimated saving 1.2 MB (72%).

Empty alt on 19 meaningful images including the homepage LCP hero High

The home hero, the 3 home service-card photos, 13 blog thumbnails (home and /insights/) and 2 legacy logos carry alt=''; /services/emergency-cleaning/ uses the keyword-only alt 'emergency office cleaning'.

Recommendation: Apply the rewrite list in findings/images.md section 4 (e.g. 'Evergreen cleaners vacuuming and wiping desks in a Toronto office with the CN Tower skyline behind').

Missing dimensions and upscaled thumbnails High

23 placements lack width/height; CLS 0.075 measured on mobile https://www.evergreencleaningservice.ca/how-to-decide-on-a-cleaning-company/ when a lazy, dimensionless JPEG entered view; emergency and industrial pages have a lazy dimensionless JPEG as desktop LCP; 13 blog thumbnails are 300x150 WordPress crops upscaled 3.6x on phones.

Recommendation: Add dimensions or aspect-ratio 3/2; no loading=lazy on first-viewport images; serve the existing 960x480 feature set for thumbnails via the same component.

Generic OG image on 7 pages; no og:image dimensions or alt High

evergreen-modern-commercial-cleaning-hero-og.jpg is reused on /, /services/graffiti-removal/, /services/post-construction-cleaning/, /services/pressure-washing/, /locations/toronto-downtown/, /locations/mississauga/ and /insights/; 0 of 21 pages declare og:image:width, og:image:height, og:image:alt or twitter:image:alt (JAN-PRO declares all four).

Recommendation: Page-specific OG cards per findings/image-plan.md section 4 (home, 7 locations, about first); add the four meta tags in the shared layout.

AI-generated photography without provenance metadata; legacy logos in posts Medium

No EXIF, XMP, IPTC or C2PA on any file; the same CN Tower skyline and identical green polos appear in nearly every 'job site' photo; no real crew, van or before/after photo on any of the 21 pages. Four posts still embed WordPress-era logo banners (one filename typo 'torotno').

Recommendation: Inject IPTC DigitalSourceType=trainedAlgorithmicMedia on generated files at build time; add genuine photos to About, Locations and the gallery; remove the legacy logo banners.

Schema image quality and minor items Low

Organization image is the 884x265 logo banner; BlogPosting image is 960x480 (Google wants 1200 px or wider in 16:9, 4:3 and 1:1); post feature images are not 2x-ready on desktop and lack fetchpriority; no SVG favicon or web manifest; first home card is lazy at 809 px on an 844 px viewport.

Recommendation: ImageObject arrays per findings/image-plan.md section 5; add a 1600w candidate and fetchpriority to post heroes; add an SVG icon and manifest; eager-load the first card.

2.7 AI Search Readiness

Score: 60/100

What Works

- Technical accessibility 90/100: server-rendered, robots.txt allows all; identical 200 responses to GPTBot, OAI-SearchBot, ChatGPT-User, ClaudeBot, Claude-SearchBot, PerplexityBot, Google-Extended, Googlebot, Bingbot, CCBot and Applebot-Extended (spoofed UA test; Cloudflare verified-bot rules untested)
- Structural readability 75/100: clean H2/H3 hierarchy, lists for inclusions and price factors, FAQPage on 14 pages with 15-54 word answers, strong scope statements
- Quotable specifics already exist on the office page ('Busy offices are usually cleaned every weeknight', 'Armstrong Manufacturing's ProSeries Green line ... UL Environment (ECOLOGO)'); Evergreen ranked #1 and #3 with a Bing Places listing on the one branded Bing SERP that loaded

Findings

Authority and brand 30/100: split entity, conflicting directory NAP, no named person, no Wikipedia/ Wikidata entity, name collision High

Testimonials say 'Evergreen Cleaning Service(s)' while schema and footer say 'Evergreen Office Cleaning'; no alternateName, no 'formerly' statement; MapQuest, WhatsYourHours, Fyple, Chamber of Commerce and Canadian Business Directory carry old data; a separate 'Evergreen Cleaning Services' (evergreencleaningservices.org, 647-831-2284) appears beside the brand on Bing. Evidence: findings/geo.md section 5.

Recommendation: Unify the entity in schema, on the page and across directories; rename social display names consistently; add GBP and Bing Places URLs to sameAs.

Citability 62/100: almost no quantified facts, no definitional entity sentence, About page 25/100 High

No prices, frequencies by square footage, response times, client or building counts; 'how much does office cleaning cost in Toronto' is answered only with 'after a walkthrough'; the clinic page does not cite Ontario IPAC/PIDAC (jan-pro.ca markets 'IPAC-compliant'); no owner or account executive is named ('Art' appears only in a review).

Recommendation: Open each page with a definitional 40-60 word answer; add hard numbers once confirmed; name the owner with a bio and Person schema; add an indicative price-range answer; cite IPAC/PIDAC on the clinic page.

Freshness and uniqueness Medium

Blog posts dated 2020-2023 with the organisation as author; no dateModified on service pages; the five-step 'How it works' and price-factor blocks repeat word-for-word across the home, office and medical pages.

Recommendation: Visible 'last updated' dates and dateModified on service pages; keep shared blocks below a unique answer-first lead on each page.

Off-site footprint thin; discovery files absent Low

No YouTube presence found; HomeStars, BBB, Clutch and Yelp unverified; /llms.txt 404 (jan-pro.ca publishes one; Google says it does not use the file); no Content-Signal; Cloudflare AI Crawl Control settings unverified. Live AI answers could not be tested (Google 429, Perplexity 403, Copilot empty shell); multi-modal audit and Reddit/ YouTube/press sweeps not run.

Recommendation: Grow reviews and claim profiles under the new name; short process videos on YouTube; Bing Webmaster Tools and IndexNow; a curated llms.txt last; confirm verified search crawlers are not challenged in Cloudflare; run a monthly manual prompt log in ChatGPT, Perplexity, Copilot and Google AI Mode.

2.8 Local SEO & Reviews

Score: 46/100

What Works

- GBP name 'Evergreen Office Cleaning' matches the site; primary category 'Janitorial service' is correct; phone, website and hours match; rating 5.0; the site's review link https://g.page/r/CW9cqxQ9_IfYEBM/review resolves to the same place
- Core NAP on site, footer and JSON-LD matches GBP; click-to-call tel link; 'Review us on Google' link in the footer
- Honest service-area copy ('We do not have an office in X; crews travel from 243 Queen St W'), no fake per-city pins or map embeds

Findings

Shared serviced-office address with suspension risk Critical

GBP address line reads 'Floor 1 - Green Offices Toronto Inc.' and the Street View photo shows Gianni's Gelato at 243 Queen St W; GBP guidelines may treat the listing as non-staffed. Evidence: Google Maps cid 15602716773318351983; findings/local.md section 1.

Recommendation: Confirm a staffed, signed premises; otherwise convert the profile to a service-area business (hide the address, set the 10-city service area) and align footer wording.

Review volume and recency far below competitors Critical

5.0 from 10 reviews, about 2 in the last 12 months, 1 generic owner reply 5 years ago; JAN-PRO's three GTA profiles hold 786 reviews (4.88 weighted); the homepage Trustindex quotes are from 2021-2022; competitors in the SERP show 53-140 reviews.

Recommendation: Review programme of 4-6 per month (QR/short link in post-service emails and account-executive check-ins), replies within 48 h, service and area keywords requested naturally; refresh homepage quotes as new reviews land.

Citation inconsistency across aggregators Critical

Old name on chamberofcommerce.com, fyple.ca (two duplicates, 'since 1990'), whatsyourhours.com (old 416-281 phone) and canadianbusinessdirectory.ca; MapQuest lists 130 Broadlands Blvd (https://www.mapquest.com/ca/ontario/evergreen-cleaning-service-454587596).

Recommendation: Correct every listing to 'Evergreen Office Cleaning, 243 Queen St W (or SAB), (416) 803-4880, evergreencleaningservice.ca'; settle one founding year.

GBP content and directory presence High

Only 2 photos, no posts, Q&A/attributes/services not visible; Yelp, HomeStars, BBB (no Toronto profile under either name), YellowPages.ca, Canada411, Cylex, Bing Places and Apple Business Connect unverified or absent; Evergreen did not appear in the first 6-8 results of any of four Google Maps samples (office cleaning toronto, commercial cleaning toronto, janitorial services toronto, office cleaning mississauga).

Recommendation: 25+ real photos, weekly posts, services list, seeded Q&A, secondary categories, UTM'd quote link; claim and complete the Tier-1 directories under the new name and add them to sameAs.

On-site local gaps Medium

/reviews/ is a form; no live rating or count on money pages; no map or directions on /contact-us/ and /contact/ 404s; 6 stated service areas (North York, Scarborough, Richmond Hill, Pickering, Ajax, Oshawa) have no page and are unlinked text on /locations/; schema geo is 53 m from the pin at 4 decimals with no hasMap or foundingDate; a different 'Evergreen Cleaning Services' competes on brand searches.

Recommendation: Real reviews page; show the rating once permitted; directions block; link every area name on the hub; build North York, Scarborough and Richmond Hill only after intake C5 with 3+ real local facts each, one combined Durham page at most; geo 43.65019 / -79.38856; consistent brand with differentiators in the GBP description.

2.9 Search Experience (SXO)

Score: 58/100

What Works

- Page types match the SERP for most queries; /industries/property-management/ (1,179 words) faces 454-573 word competitors, the most winnable SERP
- On the page itself Evergreen's office page (persona score 73) beats JAN-PRO's office page (63) and quote page (50): scope, limits, FAQ and the after-hours line 'the team that holds your keys is the same team every visit'
- H1 and both CTAs above the fold on mobile; lab LCP 0.94 s; the paid landing page pattern (big phone, specific offer, sticky Call/Quote bar) is the best page on the site

Findings

Proof far below ranking competitors High

MCA 140 Google reviews, Dust 'til Dawn 83 with AggregateRating, Impact '53+', JAN-PRO '4.8 stars, 700+ Toronto clients', CIMS certification on Impact and Everest; Evergreen shows 4 reviews dated 5-6 years ago, no case studies, no real crew photos, no certification beyond WSIB/bonded/insured. Persona Proof scores 1-3 of 5 everywhere; the clinic page has no testimonial at all.

Recommendation: Reviews programme, 2-4 case studies (intake B4), real photos (B5), a dental testimonial on the clinic page; evaluate CIMS.

No price guidance anywhere Medium

Price scores 0-2 of 5 for every persona on every page. Competitors anchor $225-$250/month (Arelli listicle), 'from $250 per month' (ServiceMaster), 'fixed monthly rates' (We Clean It), 'from CAD $400' (Clean Papi); HomeStars quotes $0.10-0.25/sq ft/month and $30-60/hr. Evergreen has no page for the cost question.

Recommendation: Client-confirmed price-guidance block on office, commercial, clinic and city pages; publish 'How much does office cleaning cost in Toronto? (2026)'.

No after-hours security protocol block; Mississauga and post-construction page gaps Medium

No key/fob log, alarm handling, ID or confidentiality statement (the decision-stage trust question); https://www.evergreencleaningservice.ca/locations/mississauga/ renders the H1 above the breadcrumb, has no BreadcrumbList and over-claims 'health-grade sanitization adhering strictly to clinical hygiene standards'; the post-construction H1 lacks 'Toronto', phases and a price basis while the SERP is 9/9 dedicated pages with price anchors.

Recommendation: After-hours access block on home, office, clinic and PM pages (intake B1/B2); fix the Mississauga order, schema and claim; add geo, phases, price basis and before/after photos to post-construction.

Mobile usability and overlays Medium

Body copy 13.1 px/12.6 px on mobile (JAN-PRO 18 px); header phone and hamburger 40x44, CTAs 42 px, footer links 28 px, social icons 24x24, checkboxes 18 px; the leadnet chat bubble covers the trust strip and the quote form's Phone field and shows a black circle while loading; mobile menu has no overlay or close-on-tap; logo JPG with an off-white box; LP star rating 3.25:1 contrast.

Recommendation: 16 px body, 44 px targets, site-wide fixed bottom Call/Quote bar as on the LP, defer or reposition the bubble on mobile, transparent logo, darker star colour.

SERP features not observable Info

All SERPs came from a US-origin index without Toronto personalisation; no local pack, ads, AI Overview or People Also Ask was seen; Evergreen appeared in 0 of 42 top-10 sets; a third party places it near position 27 for 'commercial cleaning service toronto' (unverified).

Recommendation: Set up Toronto-geolocated rank tracking for the 40-keyword set before judging any KPI.

2.10 Authority & Backlinks

Score: 12/100

What Works

- Clean, complete redirect map: every probed legacy URL (/commercial-cleaning-toronto-gta/, /office-cleaning-and-janitorial-toronto/, /property-management-and-building-maintenance/, /disinfection-cleaning/, /testimonials/, /blog/*, /feed/, /author/admin/) returns a single-hop 301 to a 200 page
- Harmonic-centrality rank 15.3M of 135.0M (top 11.3%) shows at least one inbound path from a well-connected domain; real Facebook, X and LinkedIn profiles referenced in sameAs

Findings

Link equity at the Common Crawl graph floor (score is a low-confidence estimate; Backlink Health Score INSUFFICIENT DATA) High

PageRank rank 53.2M of 135.0M (value 3.84e-9 vs floor 3.79e-9); 3 hosts; 64 captured URLs; first Wayback capture 2019-08-17. jan-pro.com PageRank rank 204K (34x floor) with 26 hosts; jan-pro.ca rank 3.3M. No Moz, DataForSEO, Bing or Open PageRank credentials; the mention sweep and inbound-edge scan did not complete (raw/backlinks/edges_hits.txt is incomplete, not 'no links').

Recommendation: Realistic SMB plan: supplier listing (Armstrong ProSeries Green), client testimonial and vendor-page links, BOMA Toronto / Toronto Board of Trade / BIA directories only with true memberships, BBB profile, HomeStars/Yelp/YellowPages/Canpages, local trade press with a data piece, partner vendors; reclaim old-brand mentions; finish the edge scan and get an Open PageRank key for a baseline; no bought directory blasts or PBNs.

Old brand split and name collisions hinder citation matching Medium

Facebook, LinkedIn and X handles, testimonials and the domain still say 'Evergreen Cleaning Service'; BBB search returns Evergreen Carpet Cleaning (Mississauga) and Evergreen Cleaning Services (North York), likely different businesses.

Recommendation: Add 'formerly Evergreen Cleaning Service' where true; use one NAP and both names consistently; run the mention sweep once a working search tool is available.

2.11 Agent Readiness

Score: 82/100

What Works

- Lighthouse Agentic Browsing 2/2 (mobile and desktop) and 12 of 13 agent-critical checks passed; JAN-PRO 1/2 and 5/11
- Content in server HTML; labelled landmarks (nav Primary and Breadcrumb, skip link, named form); 0 unnamed interactive elements in the accessibility tree on all four pages tested; label for=, fieldset/legend, full autocomplete tokens, inputmode; role=alert aria-live=assertive error summary with per-field aria-describedby; focused role=status thank-you; tel and mailto fallbacks with stated hours

- Quote-intent structured data (CleaningService with hours, areaServed and catalog; Service on the office page); JAN-PRO has none on its quote path and hides its form until scroll

Findings

reCAPTCHA v2 checkbox is the one hard stop for an agent completing a quote High

On https://www.evergreencleaningservice.ca/request-a-quote/ the widget loads on form intent inside a cross-origin iframe and a risk-based image challenge may follow; every other field could be filled by accessible name. The 22 Oct 2026 revert (commit 5246207) restored 8 required fields including a full street address.

Recommendation: Keep phone and mailto prominent; consider score-based protection (reCAPTCHA v3 or Turnstile managed) for the hot path; offer a callback alternative if spam controls allow; decide the form length with the client (ACTION-PLAN.md decision D-A).

Form semantics and schema for the quote task Medium

Service checkboxes do not match site service names (no Industrial & Warehouse or Post-Construction; 'Reno Construction Clean-up'); no facility type, size or frequency fields; required state only via '*' with no aria-required and no cue on City/Province/Postal; Service lacks availableChannel, offers and potentialAction; areaServed granularity differs from the form datalist; 'as soon as possible' (in page) conflicts with 'within 2 hours' (/thank-you/).

Recommendation: Align checkbox names, add optional facility fields, aria-required true, a ServiceChannel pointing at /request-a-quote/, consistent areaServed, and one machine-readable response-time statement.

Honeypot fakes success; discovery files absent Low

onHoneypot in src/lib/quick-quote.ts returns the success message for any filled trap field, so a DOM-filling agent loses the lead silently; no /llms.txt, ai-catalog.json, WebMCP annotations or Markdown delivery (absent on both sites; no ranking claim). Agent user-agent matrix, Web Bot Auth and live submission were not run.

Recommendation: Return a neutral 'please call' message on honeypot hits; optional llms.txt (adds one counted Lighthouse audit); tidy the home h3 'WE ARE ACCEPTING NEW CLEANING CLIENTS.' and footer H2s.

3. Action Plan

Phase 1: Critical Fixes Week 1

- C1 Access and measurement first: verify Search Console (sc-domain), create GA4 and add it to GTM-5W69BTJQ as one Google tag, add Custom Event triggers for form_start, lead_form_error, phone_click, email_click and quote_cta_click, add the site_environment=staging blocking trigger, confirm the Ads lead_form_submission and call conversion settings, obtain GBP manager access (Both; metric: GSC and GA4 reporting within 14 days, Ads 'Recording conversions')
- C2 Confirm migration 0009 (lead_status, lead_offline_conversions) is live on Neon main as HANDOFF.md records (applied 2026-10-17), start the weekly lead review in /admin/leads/, create the three Secondary offline conversion actions (Both; metric: every lead has a status within 7 days, first upload accepted)
- Request written client decisions: D-A quote form (22 Oct revert to 8 required fields incl. street address and visible reCAPTCHA v2; recommended: shorten to Name, Business, Email, Phone, Service and judge on 30 days of GA4 funnel data), D-B GBP address, D-C brand name and founding year (Client)
- C4 Apply the GBP address decision; C5 issue review-programme assets (short link, QR, post-service email line) and reply to the two newest reviews (Both; metric: 4-6 new reviews per month)
- M1 noindex /search/ and exclude it from the sitemap; M2 first step: real lastmod and drop /insights/page/2-4/ from the sitemap (10XiD; metric: /search/ excluded in GSC)
- H1 Security headers in public/_headers with a report-only CSP (10XiD; metric: headers present, 0 CSP violations after two weeks)
- H7/H8/H9 first steps: remove the competitor link in the break-rooms post; fix 'psychically' and the COVID lines on /services/disinfection-cleaning/; retitle /services/ and drop '| Evergreen Office Cleaning' from the 7 location H1s (10XiD)
- H3 Video: load /video/lead-net.mp4 on click, 30-day cache header, keep the bubble off form fields on mobile (10XiD; metric: desktop transfer 3.1 MB to about 0.65 MB)
- H11 Alt text on the 19 empty-alt images and og:image:width/height/alt + twitter:image:alt in the layout; H12 first step: alternateName, foundingDate 1989, geo 43.65019/-79.38856, hasMap, BreadcrumbList on the 7 templates (10XiD; metric: 0 validator errors)
- L9 Confirm drift/baseline-2026-10-28.json as the reference for every deploy (10XiD)

Phase 2: High-Impact Improvements Weeks 2-3

- H2 Container audit with the ads owner: one Google tag for GA4 and Ads, decision on deferring GTM to first interaction or idle, drop the Cloudflare beacon; M4 PSI re-run with an API key on /, /services/office-cleaning/, /locations/mississauga/, /lp/office-cleaning/ (Both; metric: PSI mobile 85+, TBT under 200 ms)
- H4 Rebuild /reviews/ with dated Google reviews and attributed testimonials; refresh the 2021-2022 homepage quotes as new reviews land; show the live rating once intake B3 permits (Both; metric: 10+ dated reviews on page, GSC CTR up at stable position)

- H5 Rebuild /about-us/ with named owner and team, photos, 1989-to-today history including the rename, WSIB and insurance evidence, AboutPage and Person schema, 'formerly Evergreen Cleaning Service' sentence (Both; metric: 600+ words with named people)
- H6 Half-day photoshoot per findings/image-plan.md section 3; place real photos on the 8 image-less money pages; retitle or remove /cleaning-demo-gallery/; label any remaining generated file with IPTC DigitalSourceType (Both; metric: 0 pages without a content image)
- H10 ResponsiveImage component for the 16 body JPEGs, swap the 300x150 thumbnails for the 960x480 feature set, remove the 4 legacy logo banners (10XiD; metric: unique image payload 1.64 MB to about 0.46 MB, CLS 0.01 or lower on all posts)
- H12 remainder: @id on page-level Service nodes, catalog items with url, WebPage nodes with dateModified, Service.availableChannel to /request-a-quote/, BusinessAudience; validate in the Rich Results Test (10XiD)
- H13 GBP build-out (25+ photos, weekly posts, services, Q&A, secondary categories, UTM'd quote link) and Tier-1 directory claims (Yelp, HomeStars, BBB, YellowPages.ca, Canada411, Cylex, Bing Places, Apple Business Connect, ThreeBestRated); C6 citation corrections on MapQuest, WhatsYourHours, Fyple, Chamber, Canadian Business Directory (Both; metric: present in the Toronto-IP local pack for one head term, 8+ profiles with matching NAP)
- C3 Location pages: add LocationEvidence fields, rewrite Markham, Etobicoke, Brampton and Oakville with client facts, wire scripts/location-gate.mjs into the build; noindex any page with no GSC impressions until it passes (Both; metric: 60%+ unique text per page)
- M3 307 to 301 for slash-less URLs; M2 type-split sitemaps with lastmod and the Worker pointed at sitemap-insights.xml; M9 Mississauga breadcrumb order, BreadcrumbList and over-claim removal, post-construction H1 geo and phases; M11 hub intros and linked area names; M13 form semantics (checkbox names, aria-required, response-time wording, honeypot message) (10XiD)
- D-A implemented per the client's decision with the funnel measured from day one (10XiD; metric: form_start to lead_form_submission rate per form_id)

Phase 3: Content & Authority Month 2

- H9 Grow /services/commercial-cleaning/ into the pillar 'Commercial Cleaning & Janitorial Services in Toronto' (2,500-3,000 words, janitorial H2 from briefs/janitorial-services.md); repoint the homepage Janitorial card; decide on a standalone janitorial page after 60 days of GSC data (10XiD; metric: one URL takes 80%+ of clicks for 'commercial cleaning toronto' variants)
- M5 first wave, evidence-gated: office-cleaning improvement (brief 5), medical-dental improvement with dental H2 and RCDSO/IPAC/PHO citations (brief 6), /services/floor-stripping-waxing/ (brief 2), warehouses and logistics (brief 3, or a rewrite of /services/industrial-cleaning/ per decision D-G) (Both; metric: each page indexed within 14 days and earning impressions within 60)
- H7 Execute the blog consolidation after the GSC click and backlink check: 38 posts to about 22, every retained post with date, named author, lists and 2-3 money-page links; H8 rebuild /services/disinfection-cleaning/ as the 301 target for the COVID cluster (10XiD)
- M6 Price-guidance block and /office-cleaning-cost-toronto/ guide after decision D-D; M7 after-hours access block and written guarantee after decision D-E; M14 definitional opening sentences and quotable facts on every money page (Both; metric: impressions for cost-intent queries, persona Price and AH-Trust scores rise)

- M8 Rebuild the legacy service pages (emergency, industrial, graffiti, pressure washing) on the office template with one 10-city service area; M10 differentiate property management from building maintenance and add the portfolio/ multi-site section (10XiD)
- M12 Mobile usability pass: 16 px body, 44 px targets, site-wide fixed bottom Call/Quote bar, menu overlay, transparent logo (10XiD; metric: 0 targets under 24 px, GA4 phone_click rate up)
- M15 Draft /franchise-vs-local-commercial-cleaning-company-toronto/ for a legal glance per competitor-pages/ RECOMMENDATIONS.md; M16 begin supplier, association and directory outreach; publish the first case study through the /projects/ gate (Both)
- C3 Lift Toronto-downtown, Mississauga and Vaughan past 60% with districts, travel, proof and local FAQs; rename / locations/toronto-downtown/ to /locations/toronto/ with a 301 (Both)
- L1-L4 Metadata trims, verbatim phrase sentences, contextual in-sentence links per the matrix in findings/clusters.md section 6, tag-sidebar cap, breadcrumb via /insights/, heading clean-up (10XiD)

Phase 4: Monitoring & Iteration Ongoing

- Weekly: Toronto-geolocated rank and local-pack checks for the 40-keyword set in SEO-PLAN.md section 8; GSC coverage and crawl stats (no 307 chains, no 'Crawled - currently not indexed' growth); lead dispositions in /admin/ leads/ and the offline conversion upload; review replies within 48 h
- Monthly: GA4 funnel by form_id and landing page; GBP Performance export (calls, website clicks, directions, search terms); citation spot-check; AI prompt log of 10 fixed prompts in ChatGPT, Perplexity, Copilot and Google AI Mode; CrUX field data once available; drift/scripts/diff_baselines.py after each deploy
- Quarterly: re-measure location-page uniqueness; content-decay review (refresh pages with falling impressions, update dateModified only on real edits); comparison-page source re-verification; link and mention sweep; evidence-based decisions on North York, Scarborough and Richmond Hill pages, a standalone janitorial page, a dental-only page and service-by-city children (ceiling 14 indexable location URLs)
- Programme KPIs: reviews 10 to 25+ at 90 days and 60+ at 12 months; Evergreen in the Toronto-IP pack for at least one head term by month 3; organic qualified leads tracked by page from month 1; named in 2+ curated Toronto lists and cited for 3 of 10 AI prompts by month 12; re-audit SEO Health Score target 80+ (Content 65+, Images 85+, Schema 85+, Local 65+)
- Deferred by evidence: French version (not now; revisit on a francophone institutional client or FR impressions in GSC), llms.txt and Content-Signal (cheap, do last), service-by-city pages (year two, GSC-triggered)

Data Sources & Methodology

Source	Description	Update Frequency
PageSpeed Insights API	Lighthouse lab audit (mobile emulation, Moto G Power, slow 4G)	Real-time
Chrome UX Report (CrUX)	28-day rolling field data from real Chrome users	Daily ~04:00 UTC
CrUX History API	25-week p75 trend data per metric	Weekly
Google Search Console	Search Analytics (clicks, impressions, CTR, position)	2-3 day lag
URL Inspection API	Per-URL index status, coverage state, crawl info	Real-time (2,000/day)

Report generated by Claude SEO (Google SEO Intelligence Skill), October 28, 2026
Methodology based on Google Web Vitals thresholds, Search Console documentation, and Lighthouse scoring algorithms.
