Jan-Pro vs Evergreen: Website, SEO & PPC Report

28 October 2026 · Prepared by 10XiD for Paolo Leone

Bottom line

Evergreen now has a better-built website than Jan-Pro, and it is losing anyway. The 15 Oct rebuild gave it cleaner crawl, canonical and schema hygiene (technical 84/100 vs Jan-Pro's junk-filled 3,600-URL estate; LCP is slower and security headers are missing), richer local schema, a clearer mobile fold and faster pages than Jan-Pro Canada. None of that is visible in search yet: on real Google results for Canada across eight commercial queries Evergreen appeared in no local pack, no AI Overview and no organic top ten (two headless sessions, location undetermined; a Toronto rank grid and Search Console replace this in month one), Google still shows the pre-rebuild titles for its office and commercial pages, its Google Ads have not shown since 17 Sep 2026 per the Ads Transparency Center, and nobody can prove where any lead comes from because the container holds Google Ads only.

Jan-Pro wins on three things Evergreen can copy and one it cannot. It can copy proof (a guarantee, a named inspection system, numbers beside every button), review volume (786 Google reviews across three GTA profiles against Evergreen's 10), and measurement (GA4, Bing, Meta, LinkedIn, 90-day attribution, leads split by type). It cannot copy a national brand with 2,930 posts and a domain from 2000; it should not try.

Two client decisions on 22 Oct moved against the plan: the quote forms went back to 8 required fields with a street address, and a 2.5 MB AI-avatar video bubble, still carrying a HeyGen watermark, was added that covers the phone field on phones. Both need a conversation with the client before anything else is built.

The five moves that matter most

1. Make the funnel measurable in the first 30 days: account access, GA4, GTM triggers for the five events the site already pushes, Ads conversion check, offline-conversion uploads; and switch off the Google tag's automatic email hashing until a consent position exists. No other result can be judged before this exists.
2. Fix conversion today: 4-field form with an invisible captcha, remove the mobile chat bubble, one reply promise everywhere, then restart Google Ads with the 2-hour reply as the headline.
3. Build proof: 4–6 Google reviews a month, real photos, a rebuilt /reviews/ and /about-us/ with named people, a written guarantee and inspection routine, the first case study.
4. Fix the entity and win locally: one business name everywhere with "formerly" and alternateName, GBP completed (categories, photos, posts, premises confirmed), five directory listings corrected, the .org name-twin resolved.
5. Build only pages the SERPs reward: a Toronto cost guide, four specialty service pages (floor care, day porter, carpet, window), four industry pages (warehouses, retail, schools, dental-only), and three enriched location pages; prune the blog to ~22 posts with dates, authors and service links.

Expected effect, stated as what to measure rather than a forecast: leads attributable by source within 30 days; form completion rate up after the form change; a profile with 20+ reviews, correct hours and weekly posts by day 90 (pack entry is checked on the rank grid, not promised); first-page impressions for the new service and industry pages within one quarter of publishing. Spend, traffic and ranking baselines are not known from here and are not estimated.

Scorecard

Evergreen has the better website; Jan-Pro has the better business around its website. Scores are 1–5 (1 weak, 5 strong) from the 28 Oct audits and page checks, not from traffic or rankings (no account access yet). Evergreen's 4s on

architecture, UX, technical SEO and schema are what the 15 Oct rebuild delivered; the 1s and 2s are what it left open.

Dimension	Jan-Pro	Evergreen	What closes the gap
Site architecture & navigation	5 — buyer-question IA, 16 industries, 12 services, location finder	4 — same hub structure since 15 Oct, 2 industries	5–7 industry and 4 specialty service pages
Conversion & quote funnel	4 — 6 fields, no address, form on every page; hidden until scroll	3 — 25 forms, but 8 required fields since 22 Oct; chat bubble covers the phone field	Restore the 4-field form; remove the mobile chat bubble
Trust & proof	4 — guarantee, named QA system, numbers beside CTAs (self-reported, unverified), 786 GTA reviews	2 — trust strip without numbers; 10 reviews, none shown; AI-looking photos	Reviews programme, real photos, written guarantee, named people
Design & mobile UX	3 — bottom tab bar, 18 px text; low-contrast CTAs, US banner clutter	4 — clear fold, 4.78:1 CTAs, no overflow; 13 px text, small tap targets	Bottom Call + Quote bar, 16 px text
Page speed	US 5 / CA 2 — US defers everything; CA TBT 2.0 s	4 — LCP 1.6–4.4 s across single mobile lab runs; Google tags are the whole TBT; 2.5 MB video	Defer gtag on paid pages, cap the video
Technical SEO	3 — clean templates but 47 junk URLs, Crawl-delay 10, stale since Aug	4 — 111 URLs all clean; no security headers, /search/ indexable, no lastmod	Headers, lastmod, /search/ noindex
On-page & schema	3 — Organization only on home; Service + Offer on templates	4 — CleaningService graph site-wide, FAQPage, breadcrumbs on most templates	BreadcrumbList on 7 templates, alternateName, dates
Local SEO & reviews (Toronto)	4 — three GTA profiles, 786 reviews at 4.88, local phones	1 — one profile, 10 reviews, 2 photos, no posts, hours that contradict the site, absent from packs even at its own address, old NAP on directories	4–6 reviews a month, citations cleanup, GBP completion
Content depth & cadence	4 — 2,930 posts, bylines, 1,600–2,100-word templates	2 — good core pages; blog dead since Mar 2023; location pages 3–32% unique	Prune blog, enrich locations, 2 posts a month
Authority & scale	5 — national brand since 1991, domain since 2000, 29 Canadian offices, 26 hosts	1 — PageRank at the graph floor, 3 hosts, domain registered 2016, wrong or unclaimed citations	Memberships, curated lists, supplier and client links
Paid landing pages	3 — ad final URLs not observed; a noindex /thank-you-ppc/ with its own conversion tags shows a separate PPC flow (US); the Canadian estimate page promises 24 h	3 — noindex LPs with offer, sticky bar, click-ID capture; 8-field form, tag-bound speed, no paid traffic since 17 Sep	Form and tag fixes
Paid presence & tracking	5 — ~400 ads live 27 Oct; GA4, UET, Meta, LinkedIn, CallRail, 90-day attribution	1 — ads last shown 17 Sep; Ads-only container, no GA4, funnel events unwired	Restart ads after measurement is fixed

What Jan-Pro does well

Jan-Pro wins on structure, proof and measurement, not on page quality. Its pages are heavier, slower in Canada and less honest than Evergreen's, but every page answers the buyer's question, every claim is quantified, and every lead is attributed. Evergreen adapted the first four patterns on 15 Oct; the rest are still open. The three to copy first: the profile operating rhythm with review volume, the named guarantee with a remedy, and the priced cost guide. Jan-Pro's own numbers (retention, ratings, client counts) are recorded as shown, not verified.

Pattern	Why it works	Where to see it	Evergreen today	Adapt how

Navigation by buyer question: Who We Clean (16 industries), Commercial Cleaning (12 services), How We Quote, Why JAN-PRO; "I am looking for" chooser in the hero	The visitor self-selects in one click; every industry has a landing page to rank and to send ads to	jan-pro.com	Has it (Services / Industries / Service Areas hubs) but only 2 of 16 industries exist	Build the industry pages the cluster data supports: warehouses, retail, schools/daycares, gyms, dental-only
Three persistent CTAs on every viewport: utility bar, right rail, fixed 90 px bottom bar on mobile (Free Estimate / Find Location)	The quote action never scrolls away on a phone	jan-pro.com	Sticky header with a phone icon and Get a quote; on mobile the number shows only on the hero button and in the menu	Add a fixed bottom Call + Quote bar site-wide; show the number as text
Quote form on every page, 6 required fields, no street address, invisible Turnstile; jan-pro.ca's estimate page opens with a single postal-code box	Lowest friction a B2B buyer will accept; postal code is enough to route	How We Quote	25 forms, but since 22 Oct they require 8 fields including street address plus a visible reCAPTCHA checkbox	Return to 4 required + optional city; keep the honeypot; load the captcha invisibly
Named quality system and a guarantee with a remedy: "JAN-PRO Tracker", 50-point inspections, reports shared with clients, before/after photos, satisfaction guarantee with re-clean; on jan-pro.ca, five named steps after the estimate request, a 30-day inspection period and a site logbook	Turns "we're reliable" into something a facility manager can hold you to	Office cleaning · Get an estimate (CA)	None stated; process page is generic	Client supplies inspection cadence and a re-clean promise (intake B1, B2); name the routine
Proof stacked beside the CTA: "98.7% retention", BBB A+, "4.6★ from 295+ reviews" (Atlanta), "700+ Toronto clients", award badges, real photography (all self-reported and unverified; the stat strip varies by office)	Specific numbers near the button raise trust at the moment of decision	Atlanta · Toronto West	Trust strip without numbers; 4 Google reviews aged 5–6 years; GBP 5.0 from 10 reviews not shown on site	Show the live GBP rating and count (with permission), named recent reviews by every form, real photos
Public price guidance: "monthly cleaning costs starting as low as $225", a "what drives the price" section, a 24-business-hour reply promise, and an indexable cost guide on jan-pro.com quoting $0.05–$0.25 per sq ft and $25–$60 per hour	Answers the question buyers search for and filters out tyre-kickers	jan-pro.ca office cleaning	Price factors with no figures; "from $30/hr" only on noindex paid pages	Publish a Toronto cost guide with ranges the client approves (intake A7)
Regional hub pages that go fully local: local phone replaces the 866 line, office address and map, local reviews, sub-city pages, region-specific industry pages, region-tagged posts; LocalBusiness schema per hub	Each metro becomes its own small site that ranks for "[service] [city]"	Atlanta · Tempe	7 city pages that are 3–32% unique; one office, so no local phone or address to swap	Enrich Mississauga and Vaughan first with real local facts; merge or hold the other five until data justifies them
Service and industry templates with Service + OfferCatalog + BreadcrumbList schema, 1,600–2,100 words, "What's included" H2, industries grid, 57–70 internal links per page	Depth plus dense interlinking spreads authority across the whole estate	Medical facility	Same template shape, 1,200–1,560 words, 31–35 internal links	Add related-page blocks and in-body links; blog posts must link to service pages
Content engine: ~2,930 posts tagged by region and industry, author bylines, BlogPosting + Person schema; jan-pro.ca touched 8 posts in 2026 and 17 in 2025	Long-tail coverage and freshness signals at scale	post sitemap	38 posts, newest Mar 2023, no bylines or dates, 26 link to no service page	Prune to ~22 posts, add dates and a named author, publish 2 posts a month tied to service pages

Measurement as a system: one GTM container routing to 150–170 GA4 IDs and 7 Ads accounts, CallRail number swap, 90-day first- and last-touch click IDs, franchise vs cleaning leads split at the form with separate thank-you pages; Canada adds GA4, Bing UET, Meta, LinkedIn, Clarity, HubSpot	Every lead is attributed to a campaign, an office and a channel; budgets follow proof	GTM-P2VXXB · Toronto West	Google Ads only: no GA4, no triggers for the five funnel events the site already pushes, session-scoped attribution	Install GA4, wire the existing events, add UET, start the weekly offline-conversion upload
Always-on paid presence: ~400 verified ads at jan-pro.ca in text, image and video, English and French, location assets per office, last shown 27 Oct 2026	Brand demand is captured every day, in both languages	Ads Transparency Center	10 text ads, last shown 17 Sep 2026	See PPC findings
Bilingual site with correct en/fr/x-default hreflang on every page	Required for Quebec and Moncton franchises	Toronto West (FR)	English only, correctly tagged en-CA	Not worth copying for Toronto (see Images and language)

Where Jan-Pro is weak, and Evergreen can win locally

- Toronto buyers land on jan-pro.ca: two Toronto franchise pages (Toronto West in Mississauga, Toronto East in Scarborough) of 640–720 words — among 35 Canadian office pages that also include a dedicated Mississauga page and Durham sub-pages for Ajax, Pickering, Whitby and Oshawa — with an unsourced stat strip (Toronto West: 15+ years ranked #1 by Entrepreneur, 96% client retention, 700+ Toronto clients, 4.8★), no FAQ, no Google review widget, a 10 km service radius that does not reach downtown. Six of Evergreen's seven cities have no Jan-Pro page at all.
- Jan-Pro Canada's public reviews are stale and middling: Trustpilot 3.8 from 531 reviews, last review 29 Apr 2025, including a 1-star about the Mississauga team. Evergreen's GBP is 5.0 from 10.
- jan-pro.ca is slow (Lighthouse mobile 59–63, TBT 3.8–4.5 s, 1.2 s server response on Toronto West). Evergreen's accessibility and SEO scores are 100 vs Jan-Pro's 88–93 / 92.
- jan-pro.com hygiene at scale: 47 numeric-suffix URLs in the sitemap including indexable "Auto Draft" posts, a duplicate retail industry page, older sub-city pages with no structured data (the 2026 ones carry LocalBusiness and FAQPage), 122 URLs listed two to seven times across its sitemaps with conflicting dates, Crawl-delay 10 (ignored by Google, honoured by Bing), and sitemap dates that stop on 12 Aug 2026, and franchise recruitment mixed into the customer funnel.
- Jan-Pro's quote form does not exist until the visitor scrolls or taps; Evergreen's is rendered at load.
- US-centric clutter: a "California Residents" banner pushes the mobile H1 to 199 px; CTA contrast 2.3–3.0:1.
- Durham reverses the local story: Jan-Pro has a Durham Region page plus dedicated Ajax, Pickering, Whitby and Oshawa pages, while Evergreen names Pickering, Ajax and Oshawa on its homepage and in its schema but has no page for them. Build one Durham page only if the client confirms crews still travel there (intake C3).
- jan-pro.ca's estimate flow starts with a postal-code box; in one test, downtown M5V 1Z4 was routed to the Scarborough (Toronto East) office. A downtown buyer gets a franchise across the city; Evergreen's office is on Queen St W.

Findings — website and conversion

The site converts well above the fold and on paid pages; it loses buyers on proof, on the quote form, and on a chat widget that covers content on phones. Visual/UX score 72/100 (claude-seo visual audit, 28 Oct 2026, 13 pages at 1366 px and 390 px). Agent-readiness: 12 of 13 checks pass; only the reCAPTCHA stops an AI assistant from requesting a quote on a buyer's behalf.

What a buyer sees	Evergreen	Jan-Pro	Edge
Hero message	Service + city in the H1, proof lines, phone button, full-width quote CTA at 4.78:1 contrast	Slogan H1 ("Highest level … Guaranteed"), "I am looking for" chooser, 866 number	Evergreen
Sticky navigation	Sticky header, 60 px mobile; Services / Industries / Service Areas accordions work	Utility bar with phone + Free Estimate; persistent bottom tab bar on mobile	Jan-Pro on mobile bar
Body text (mobile)	12.6–13.1 px	18 px	Jan-Pro
CTA contrast	4.78:1	2.3–3.0:1 white on orange/green/blue	Evergreen
Quote form	8 required fields; reCAPTCHA loads on focus; inline errors; ~90 px gap above submit	9 fields, hidden until scroll; Turnstile; business name appears after a dropdown	Neither; Evergreen fixable
Proof near CTA	Trust strip (since 1989, WSIB, bonded, insured); 4 Google reviews aged 5–6 years	"4.8★", "700+ Toronto clients" (jan-pro.ca), BBB A+, award badges, real-looking photography	Jan-Pro
Imagery	Consistently AI-looking; logo JPG with an off-white box	Branded photography	Jan-Pro
Paid landing page	/lp/office-cleaning/: large phone, specific offer, form in view, fixed bottom Call / Quote bar	No dedicated paid pages found on jan-pro.com	Evergreen
Layout stability	0 horizontal overflow at 320/390 px; CLS ≤ 0.005	Hero slider + 73 scripts (56 deferred)	Evergreen
Accessibility tree	0 unnamed interactive elements; landmarks and headings clean	Unlabelled ZIP input, unnamed footer logo, h1 → h3 jump on /how-we-quote/	Evergreen

Fix now (costs leads today)

- On 22 Oct 2026 the quote forms were restored to the original site's field set (commit 5246207, "bring back the original site's fields and notification email"): 8 required fields including street address, city and postal code, with a visible reCAPTCHA checkbox, on all 25 forms including the paid pages. Jan-Pro asks for 6 fields and no address. The component header records it as the client's own request, with the conversion trade-off accepted. It undoes the 15 Oct change and is the largest single conversion risk on the site; it deserves a second conversation with the client once GA4 can show the form-start-to-lead rate.
- The chat avatar covers the Phone field on /request-a-quote/, hero content and body text on mobile. Its close button is 26×26 px at 3.64:1 contrast and it sometimes renders as a black circle. The clip itself is an AI-avatar video that still carries a HeyGen free-tier watermark, loaded on all 73 indexable pages; a buyer who recognises the mark learns the "account executive" speaking to them is synthetic. Remove it on mobile or move it clear, and replace the clip with a real person or drop it.
- The quote form's top error banner tells visitors to tick "I'm not a robot" when no such box is on screen yet. The four address sub-fields are required but carry no asterisk (only the group label does), so a buyer who fills every starred field still gets three errors plus the captcha nag. The submit handler refuses to post if the browser blocks reCAPTCHA (Brave shields, uBlock, some corporate proxies), an untested loss path. Eight required fields is high for a first contact, and the general contact form requires all ten of its fields, including a full postal address, just to send a message.
- The eight service checkboxes do not match the site's service names: no Industrial & Warehouse; post-construction is labelled "Reno Construction Clean-up". There is no facility size, type or frequency field, so every lead needs a qualifying call.
- In-page confirmation says "as soon as possible"; /thank-you/ says "within 2 hours". Pick one and match the ads.

- /reviews/ is a testimonial submission form with the blog sidebar and a tag cloud (including Covid-19). It shows no reviews.
- Location pages such as /locations/toronto-downtown/ open with an all-caps title-tag H1 ("… | Evergreen Office Cleaning"), a large gap, and no CTA or phone in the fold.
- At 320 px the header "Get a quote" button disappears.
- The word "guarantee" appears nowhere on the home, office, quote or paid pages, and inspections are described only as "inspections and adjustments". Jan-Pro's H1 ends "Guaranteed." and its Canadian site states the remedy (issues resolved within one business day, otherwise a complimentary clean). This needs the client's wording (intake B2).

Improve next

- Add a site-wide fixed bottom Call + Quote bar on mobile (Jan-Pro's strongest mobile pattern).
- Raise mobile body text to 16 px; footer and area links (26–28 px tall), social icons (24 px), "Read more" (22 px) and breadcrumbs (15 px) to 44 px tap targets.
- Replace AI-looking hero, card and blog imagery with the client's own crew and site photos; export the logo with a transparent background.
- The homepage "Google Reviews" block is a static snapshot, not a live widget, so new reviews never appear and the "5 years ago" labels cannot change without a rebuild. Add named, dated, recent reviews next to every form, pulled from the live profile, and company names on testimonials.
- The honeypot field returns a fake success, so a DOM-filling assistant loses the lead silently; return a distinct but harmless state instead.
- The legacy blog sidebar, with a search box, Recent Posts and a tag cloud that still lists Coronavirus and Covid-19, sits on 49 of 73 pages, including About, Contact, Reviews and Privacy. Keep it to the blog, or drop the tag cloud.

Not measured: Jan-Pro's mobile menu and quote form did not render in headless Chromium, so its form UX is judged from markup only. Screenshots (60 PNGs) are in the audit folder.

Findings — SEO

The site's structure and schema are sound. What holds it back is thin and unproven content, near-zero link authority, and a brand name that is split across the web. Overall SEO Health Score: 66/100 (weighted: technical 22%, content 23%, on-page 20%, schema 10%, performance 10%, AI readiness 10%, images 5%; on-page derived at 68). Component scores below are from the claude-seo audit run on 28 Oct 2026; the 26-page PDF report and the action plan accompany this doc.

Audit area	Score /100	Headline
Technical SEO	84	111 URLs crawled, all 200, one H1 each, self-canonical, no duplicate titles; no security headers; /search/ indexable; GTM + gtag ≈ 325 KB of a 610 KB homepage
Performance	80 (lab, judgement)	15 Oct work landed: no render-blocking CSS, captcha on intent; Google tags cost 0.44–0.59 s TBT on every page; a 2.5 MB video downloads on every view
Local SEO & reviews	46	GBP 5.0 from 10 reviews, 2 photos; Jan-Pro's three GTA profiles hold 786 reviews at 4.88; absent from every local pack sampled; old name and address on directories
Schema / structured data	74	Solid site-wide CleaningService graph; BreadcrumbList missing on 7 templates; blog dates are CMS defaults
Sitemap & architecture	70	Clean XML, 73 URLs all 200; no lastmod; /search/ wrongly indexable; all 7 location pages fail the uniqueness test

AI search readiness (GEO)	60	Every AI crawler allowed, server-rendered; brand entity split, few quotable numbers, no named person
Search experience (SXO)	58	Right page types mostly exist; 4 pages compete for "commercial cleaning toronto"; no price guidance, weak proof
Content quality & E-E-A-T	43	Rebuilt core pages beat Jan-Pro; location pages 3–6% unique; blog stale since Mar 2023; imagery looks AI-generated
Authority (backlinks)	~12 (low confidence)	PageRank at the graph floor; jan-pro.com ~70, jan-pro.ca ~35–40
Agent readiness	12/13 checks	Only the reCAPTCHA stops an AI agent; Jan-Pro passes 5/11
Images	61	Hero and cards are AVIF/WebP with srcset; 8 of 21 money pages have no photo at all; 16 body photos are plain JPEGs (1.2 MB, ~72% saveable); 19 meaningful images have empty alt

Content and proof (highest impact)

- Five of the seven location pages share 94–97% of their words once the city name is swapped. Mississauga and Vaughan are about 28–32% unique. All seven count as thin.
- /reviews/ shows no reviews, only a submission form, while its meta description promises "real Google reviews".
- The four Google reviews on the homepage are all 5–6 years old. Competitors ranking for the same terms show 53–140 reviews.
- /about-us/ is 170 words with no owner, team, or evidence of WSIB and insurance.
- All sampled imagery appears AI-generated (the same uniformed pair recurs; the CN Tower is behind every interior). /cleaning-demo-gallery/ captions these as "cleaning results".
- The blog has 38 posts, newest 31 Mar 2023, with no visible dates or bylines. 26 posts link to no service page. Eight are COVID-era. One post carries a followed link to a competitor with the anchor "Toronto office cleaners". Thirty of the 38 posts receive exactly one in-content inbound link, from the paginated hub, while each post carries 26 links to noindex tag pages.
- /services/disinfection-cleaning/ is still COVID copy with typos. /services/emergency-cleaning/ lists 22 service areas against the 10 in the schema.

Structure and cannibalisation

- Google has not yet recrawled the money pages. site: results on 28 Oct still show /services/office-cleaning/ as "Evergreen Office Cleaning - Services" with the old "Visit our website…" snippet, and /services/commercial-cleaning/ as "Commercial Cleaning" with the "Torotno" typo, while the homepage, industry pages and location pages already show the new titles. Google displays only about 30 of the 73 sitemap URLs for site: (approximate; Search Console's Pages report is the real number). Request indexing for the nine service pages in Search Console and add lastmod.
- "post construction cleaning toronto" is a residential SERP (the AI Overview quotes home prices; the pack and most organic results are house cleaners). Retarget the page and its ad group to commercial post-construction cleaning and expect little organic volume.
- Buying guides and cost questions win slots: 1–3 of the organic results for "office cleaning toronto" are listicles or advice posts depending on the capture, and the People Also Ask question "What are the typical costs for office cleaning in Toronto?" appears on the office, medical and brand SERPs. A Toronto cost guide and a "how to choose" guide are ranking plays, not blog filler.
- Four pages compete for "commercial cleaning toronto": the homepage, /services/, /services/commercial-cleaning/ and /locations/toronto-downtown/. Give the homepage the commercial term and the office page the office term.

- No janitorial page exists; the homepage "Janitorial Services" card links to the office page. The cluster data says janitorial overlaps the commercial SERP (4–5 shared URLs), so fold it into a retitled commercial pillar rather than a new page.
- Every specialty service sits on its own SERP with 0–3 shared results: floor stripping and waxing, carpet, window, day porter, disinfection. Each needs its own page; none exists except disinfection.
- On real Google results served for Canada (eight commercial queries, two same-day captures on 28 Oct; Google reported the location as Canada/unknown, so packs are not Toronto-precise) Evergreen appeared in no local pack, no AI Overview and no organic top ten; a wider 42-query sample from a US index agreed. Search Console will give the full picture.
- The /industries/ hub promises seven segments but sends five of them (retail, education, hospitality, offices, industrial) to generic service pages, so a retail or school buyer who clicks their segment lands on "Commercial Cleaning Services in Toronto and the GTA" with nothing about them. Build the pages or remove the cards.

Brand entity and authority

- Schema, footer and metadata say "Evergreen Office Cleaning". The domain, Facebook, LinkedIn, X and the testimonials say "Evergreen Cleaning Service". Nothing bridges them: no alternateName, no "formerly" line, no foundingDate.
- Directories carry the old name or wrong details: Chamber of Commerce and Canadian Business Directory (old name), Fyple (two duplicates, "since 1990"), MapQuest (Foursquare data: 130 Broadlands Blvd, North York, 416-281-4328, sameAs clbcleaning.ca), WhatsYourHours (a 416-281 number). A separate "Evergreen Cleaning Services" (.org, 647 number) collides in Bing local results.
- Common Crawl web graph: Evergreen's PageRank is at the graph floor with 3 hosts; jan-pro.com has 26 hosts and about 34× the floor. Evergreen's domain was registered in Aug 2016 (CIRA) and first archived in 2019; jan-pro.com has been archived since 2000 and jan-pro.ca since 2008.
- Old WordPress URLs all 301 cleanly in one hop; no toxic links found (spam score not measurable from here).
- The brand SERP is contested. In one capture evergreencleaning.ca (Vancouver) and evergreenmaintenance.ca (Kelowna, whose Toronto landing page also ranks for "commercial cleaning services toronto") outranked the client; in a second same-day capture the client was #1 with sitelinks, but the pack slots went to Evergreen Building Maintenance profiles. The knowledge panel does render on a Toronto-qualified query (5.0, 10 reviews). In the GTA itself the twins are evergreencleaningservices.org and evergreencleaningcorp.ca, and legacy listings under the old name with a different phone (416-281) and address (130 Broadlands Blvd) still rank for the brand. The Kelowna firm, Evergreen Building Maintenance Inc., also advertises across Canada on Google (21 verified ads) and on Meta as "Evergreen Commercial Cleaning", and its site has an Ontario page.

Local SEO and reviews (the decisive gap in Toronto)

- Evergreen's Google Business Profile: "Evergreen Office Cleaning", primary category "Janitorial service", 5.0 from 10 reviews, 2 photos, no posts, newest review a month ago, then a year ago, then five years. Only one owner reply, generic. The site shows none of this.
- The GBP address carries a second line, "Floor 1 · Green Offices Toronto Inc.", which reads as a shared or serviced office. If 243 Queen St W is not a staffed premises, the profile is at suspension risk and should become a service-area business. Confirm with the client first.
- Jan-Pro's GTA profiles on Google Maps: Toronto East 4.8 from 366, Toronto West 4.9 from 211, Durham 5.0 from 209, Hamilton/Halton 4.8 from 81. Three profiles total 786 reviews at a weighted 4.88; Evergreen has 1.3% of that volume. The Mississauga profile is actively run: 10 Google Posts between 21 Sep and 28 Oct 2026, a UTM-tagged link to its office page, and a "Now under new management!" line. Competitors in the local packs sampled show

29–773 reviews (Great Commercial Cleaners 110, Dust 'Til Dawn 85, WhiteRose 595, itsGLO 773). Yet 0- and 7-review profiles appear on some queries, so category, services list and description matter as much as the count.

- Evergreen was absent from the first 6–8 Maps results for all four queries sampled ("office cleaning toronto", "commercial cleaning toronto", "janitorial services toronto", "office cleaning mississauga"). In that limited view Jan-Pro did not surface either. Two same-day captures of Google results for Canada (cloud browser, eight commercial queries, 28 Oct; location reported as Canada/unknown) confirm it: Evergreen in 0 local packs, 0 AI Overviews and 0 organic top tens; Jan-Pro's Toronto East (4.8, 366) and Mississauga (4.9, 211) profiles in the janitorial AI Overview and in up to 4 packs, with pack composition changing between captures. Keyword-named independents with 29–595 reviews hold the rest, some of them residential house-cleaning profiles.
- A second Maps listing, "Evergreen Cleaning Services" (647-831-2284, evergreencleaningservices.org, 5.0 from 15, active owner posts), competes for the brand name.
- Schema geo (43.6503, -79.3892) is 53 m from the GBP pin (about 43.65019, -79.38856); the intake doc's alternative is 324 m off. Use the GBP pin. Schema lacks hasMap and foundingDate. /contact/ returns 404 (the page is /contact-us/).
- Review velocity is the single highest-leverage local action: 4–6 new reviews a month, asked at day 30 and after praised one-off jobs, replies to all, reviews mirrored verbatim on the matching service and location pages.
- The profile contradicts the site: Google shows hours of Tuesday 7 a.m.–6 p.m. (and "Closed" at 10:40 pm on a Tuesday) while every footer says Monday to Friday 7am–10pm, weekends 8am–8pm, and the schema closes at 22:00. The GBP website link is the non-www address with no UTM, and the booking link is plain HTTP to /contact-us/. Fix the hours (intake C4 asks which hours these are), point the website link at https://www with a UTM, and the booking link at /request-a-quote/.
- Distance is not the reason for the absence: with the Maps viewport centred on 243 Queen St W, the seven "office cleaning" results still omit Evergreen while a zero-review "Commercial office Cleaning Service" at 181 Bay St appears. That points to prominence or eligibility, which makes the staffed-premises question and the review programme the two things that matter.
- The site never links to its own listing: the contact page's map link resolves to the plain street-address pin, not the business profile. Link the GBP listing from the contact page and the footer.
- Evergreen is absent from the citation and review sites B2B buyers check: BBB returns no result under either name, YellowPages.ca has no match, there is no Trustpilot profile, and ThreeBestRated's Toronto and Mississauga lists carry JAN-PRO (4.9) and not Evergreen.

Technical and schema (mostly fine)

- robots.txt allows everything; all 73 sitemap URLs are 200, self-canonical and indexable; noindex paid pages are correctly excluded.
- Fix list: add lastmod; remove /search/ and /insights/page/N/ from the sitemap and noindex /search/; make slashless URLs 301 not 307; add BreadcrumbList to /services/, /locations/, the city pages, /about-us/, /reviews/, /contact-us/, /request-a-quote/; fix blog datePublished/dateModified and add visible dates and an author; add alternateName, foundingDate 1989, an ImageObject logo and corrected geo to the site-wide node; put the Google Business Profile URL and the x.com address in sameAs (the Facebook entry answers a login wall to logged-out crawlers); drop the WebSite SearchAction, which Google stopped using in Nov 2024 and which only points crawlers at /search/.
- FAQPage markup is valid on 14 pages but no longer earns rich results; keep it, invest no further.
- Jan-Pro's own schema is weaker: Organization only, no address or hours, areaServed = country, with HTML-entity bugs; on four of five jan-pro.ca office pages opened, strict JSON parsers reject the LocalBusiness block (raw newlines in the description); schema.org's validator accepts it and Google's parser is lenient, so this is a hygiene

note, not a usable weakness. jan-pro.ca, however, already publishes an llms.txt naming its Toronto East and West offices.

- Technical crawl (111 URLs): fully server-rendered, Brotli, HTTP/3, one-year asset cache, single-hop 301s for apex and http, no soft-404s, no internal link through a redirect. Gaps: no HSTS, CSP, X-Content-Type-Options or Referrer-Policy on HTML responses (add a `/*` block to `public/_headers`, CSP in report-only first); five titles over 60 characters (Mississauga 72, Vaughan 69) and 13 descriptions over 160. Lab timings unthrottled: homepage LCP 0.94 s, office page 0.56 s; field Core Web Vitals need Search Console. Non-production surfaces are fenced correctly: the staging host answers with X-Robots-Tag noindex and /admin/ redirects to sign-in, so the one-build-on-every-host design is safe.
- Performance (Playwright, mobile throttled 4× CPU / 1.6 Mbps, medians of 3 cold runs): homepage FCP 0.73 s, LCP 1.61 s, TBT 442 ms, CLS 0; office page LCP 0.60 s; paid page LCP 1.62 s, TBT 588 ms. Blocking the Google hosts takes TBT to about 0, so the site's own code costs nothing. `/video/lead-net.mp4` is 2.53 MB, downloads on every page view 3 s after load, and is served with max-age=0 (desktop weight 3.1 MB vs 0.64 MB without it; the code comment says "40KB+"). Location pages shift CLS 0.034 from a font swap. Jan-Pro CA: TBT 2.0 s, 87 requests, 1.5 MB, 3 render-blocking files; Jan-Pro US still wins on weight (222 KB) and TBT 0 by deferring scripts to first interaction. PSI and CrUX could not be run from here (429/403); re-run with an API key.

Images and language

- Image engineering is half done. The hero, logo, home cards and five blog features use `<picture>` AVIF/WebP with srcset, width/height and fetchpriority (hero LCP 0.56–0.72 s, 23–45 KB). The 16 body photos on service and blog pages are plain 1200×800 JPEGs with no srcset or dimensions, about 1.2 MB of the site's 1.64 MB unique image payload; one responsive-image component saves an estimated 72% (768 px AVIF variants of the office-page photos already exist on the CDN, unused). Page-level scores: homepage 78/100 vs Jan-Pro's about 68; office page 80 vs about 74; Lighthouse mobile 63 and 84, with the Google tag stack the main cost on both. Eight of 21 money pages carry no content image at all (building maintenance, graffiti, post-construction, pressure washing, property management, Toronto downtown, Mississauga, About). Nineteen meaningful images have empty alt, including the homepage hero; 13 blog thumbnails are 300×150 WordPress crops upscaled 3.6× on phones. Jan-Pro serves no WebP/AVIF and heavier PNGs, but every section has a photo and every image has dimensions.
- Every OG image is a correct 1200×630 JPEG (63–143 KB), but one generic hero OG is shared by the homepage, /insights/ and all 7 location pages, and all of them look AI-generated. No og:image:width/height/alt anywhere. The schema `image` on home, about, service and location pages is the 884×265 logo banner, below Google's 1200 px guidance. A half-day photoshoot (crew, van, real sites) fixes imagery, OG and schema at once; brand tokens for the template are green #47802a / #3c6d21 with accent #f6bb06, Raleway headings, Open Sans body.
- French: do not add it now. Evergreen's `lang="en-CA"`, `og:locale en_CA` and the .ca domain are correct for one language. French Toronto SERPs are directories and job boards; Toronto has about 77,000 Francophones (2.8%) and GTA B2B buying happens in English. Translating the 30 core pages would cost roughly CAD 3.4–5.1k plus upkeep. jan-pro.ca needs French for Quebec and Moncton franchises, not for Toronto; its hreflang pairs are technically clean but tagged en-US/fr-FR.

Keyword map and SERP landscape

Eight commercial Toronto/GTA queries were captured twice on real Google results served for Canada on 28 Oct 2026 (Google reported the session location as Canada/unknown, so local packs are not Toronto-precise and pack composition changed between the two captures). Every one is led by a three-pack of Google Business Profiles with 29–595 reviews. Evergreen appeared in none of the packs, none of the AI Overviews and none of the organic top tens; its only appearances are its brand name (organic #1 with sitelinks in one capture, #3 behind two BC namesakes in the other) and

site: queries. Jan-Pro's Toronto presence is profile-driven: Toronto East (4.8, 366 reviews) and Mississauga (4.9, 211) put it in the AI Overview for janitorial and commercial services and in up to 4 of 8 packs depending on the capture, while jan-pro.ca itself appeared in the organic results at most once (#5, "janitorial services toronto"). Demand labels are approximate (no volume data); the page column is the URL that should own the term today.

Term	Intent	Relative priority (no volume data)	Evergreen page today	Seen on the SERP, 28 Oct
office cleaning toronto	recurring office	high	/services/office-cleaning/ — not in top 10 or pack	Pack: keyword-named independents with 29–595 reviews (composition changed between captures); 1–3 organic results are listicles or advice posts; PAA #1 is the cost question
office cleaning services toronto	recurring office	high	/services/office-cleaning/	People-also-search-for variant
office cleaning company toronto / office cleaners toronto	recurring office	medium	/services/office-cleaning/	"Best office cleaning toronto" also suggested
small office cleaning toronto	recurring office	low–medium	/services/office-cleaning/ (add a small-office section)	suggested variant
after-hours / night office cleaning toronto	recurring office	low	/services/office-cleaning/ scheduling section	competitors state 6–10 pm windows
janitorial services toronto	janitorial	high	missing page (nearest: office cleaning)	AI Overview + pack with Jan-Pro Toronto East; jan-pro.ca organic #5
janitorial company toronto / commercial janitorial gta	janitorial	medium	missing page	Jan-Pro in the GTA pack
janitorial services mississauga	janitorial	medium	/locations/mississauga/ (title already says janitorial)	jan-pro.ca Mississauga page
commercial cleaning toronto	commercial	high	/services/commercial-cleaning/ — absent	Pack: Great Commercial Cleaners, WhiteRose, MCA
commercial cleaning services toronto	commercial	high	/services/commercial-cleaning/ — absent	AI Overview names Jan-Pro Toronto East; pack 4.9/211; evergreenmaintenance.ca (BC) organic #6
commercial cleaning company toronto / gta	commercial	medium	/services/commercial-cleaning/	Jan-Pro in the GTA pack
best commercial cleaning toronto / top cleaning companies toronto	commercial, comparison	medium	missing (buying guide)	listicles rank
commercial cleaning quote toronto / office cleaning cost toronto	commercial, price	low–medium	/request-a-quote/; cost guide missing	PAA: "What are the typical costs for office cleaning in Toronto?"

industrial cleaning toronto / warehouse cleaning toronto	commercial	medium	/services/industrial-cleaning/ (indexed with a stale title)	—
building maintenance services toronto	commercial	low	/services/building-maintenance/ (stale title in index)	—
medical office cleaning toronto	industry	medium	/industries/medical-dental-clinics/ — indexed, not top 10	Won by local service pages leading with infection control, after-hours windows, cleaning logs
dental office cleaning toronto / clinic cleaning toronto	industry	medium	/industries/medical-dental-clinics/ + dental checklist post	—
condo cleaning services toronto / property management cleaning toronto	industry	medium	/industries/property-management/	"Condo cleaning Toronto" suggested
retail store cleaning toronto	industry	low	missing page (one old post)	—
school / daycare cleaning toronto	industry	low	missing page (one old post)	—
gym / restaurant / dealership cleaning toronto	industry	low each	missing pages	Jan-Pro has 25 industry pages
post construction cleaning toronto	one-off	high but residential	/services/post-construction-cleaning/ — absent	AI Overview quotes home prices; pack and organic are house cleaners
commercial post construction cleaning toronto / construction cleanup services	one-off	medium	/services/post-construction-cleaning/ (retarget title and H1 to commercial)	—
strip and wax toronto / commercial floor waxing toronto	one-off	medium	/services/building-maintenance/ (strip/wax mentioned 10×); dedicated floor-care page recommended	—
commercial carpet cleaning toronto	one-off	medium	missing page	—
disinfection services toronto / office disinfection	one-off	low, declining	/services/disinfection-cleaning/	—
emergency cleaning services toronto	one-off	low	/services/emergency-cleaning/	—
commercial pressure washing toronto / graffiti removal toronto	one-off	low	/services/pressure-washing/, /services/graffiti-removal/	—
office cleaning near me / commercial cleaners near me	near-me	high	no page can own it; needs the GBP in the pack	Jan-Pro's two profiles capture it

office cleaning services mississauga	location	medium	/locations/mississauga/ — absent	Pack #1 Jan-Pro Mississauga 4.9/211; organic city pages state a starting price
commercial cleaning vaughan / markham / brampton / etobicoke / oakville	location	low–medium each	the 7 /locations/ pages (Jan-Pro has no page for these five)	—
commercial cleaning downtown toronto	location	low	/locations/toronto-downtown/	—
commercial cleaning north york / scarborough	location	low–medium	missing pages (coverage text only)	Jan-Pro Toronto East H1 targets Scarborough
evergreen office cleaning / evergreen cleaning service toronto	brand	low	/ — organic #1 with sitelinks in one capture, #3 behind evergreencleaning.ca (Vancouver) and evergreenmaintenance.ca (Kelowna) in the other; the pack slots go to Evergreen Building Maintenance profiles	Knowledge panel renders on a Toronto-qualified query: 5.0, 10 reviews, "Janitorial service", "Located in: Green Offices Toronto Inc.", no recent posts
jan-pro toronto / jan pro scarborough / jan-pro reviews	competitor brand	low–medium	PPC negatives only; no bidding without client sign-off	Knowledge panel 4.9/211; Trustpilot 3.8/531; BBB not accredited

What this means for the plan

- The local pack decides these SERPs. Reviews and a complete profile outrank any page; the review programme is the top SEO action, not a nice-to-have.
- Google has not recrawled the money pages: site: results still show the pre-rebuild titles and snippets for /services/office-cleaning/ and /services/commercial-cleaning/ (including the "Torotno" typo). Request indexing in Search Console and add lastmod.
- A janitorial page is the largest open head term; fold janitorial into a retitled commercial pillar or build the page the brief describes, but decide now.
- Buying guides and cost questions win organic slots; a Toronto cost guide and a "how to choose" guide are ranking plays. Nobody owns Toronto-specific guidance yet: Jan-Pro's Toronto West page is a 700-word template with no FAQ and no guides, and its Canadian blog has no GTA post at all.
- Post-construction is a residential term; aim the page and the ad group at commercial post-construction and expect little organic volume.
- The brand itself is contested by two BC companies; the entity fixes (one name, alternateName, GBP, consistent citations) protect even branded traffic.
- Jan-Pro already answers the cost question in the index: a commercial cleaning cost guide with FAQPage quoting $0.05–$0.25 per sq ft and $25–$60 per hour, and jan-pro.ca's "starting as low as $225" a month. Evergreen publishes no figure on any indexable page; competitors in the Toronto results show $295 a month and $28–$50 an hour.

Findings — PPC

Evergreen's Google Ads appear to have stopped serving on 17 Sep 2026 (the Ads Transparency Center's last-shown dates; the field can lag and does not say whether the campaign is paused, unfunded or disapproved), and the account

cannot prove a single lead's source. Jan-Pro Canada ran ads on 27 Oct 2026 and attributes every lead to an office and a channel. Nothing here comes from the Ads account itself (no access yet); it comes from the Ads Transparency Center, the live GTM container and the landing pages.

Measure (28 Oct 2026)	Jan-Pro	Evergreen	Source
Google ads on record	~400 at jan-pro.ca (JAN-PRO of Canada Inc.; mixes cleaning-demand and franchise-recruitment creatives) + ~600 at jan-pro.com	10, all text	Ads Transparency Center
Last shown	27 Oct 2026 (18 of 18 Canadian creatives sampled)	17 Sep 2026 (8 of 10); 9 Feb 2026 (2 of 10)	same
Formats	Text, image, video; EN + FR; per-office location assets	Text only; one location asset (243 Queen St W)	same
Tags in the live container	GA4, Google Ads with forwarding-number swap and enhanced conversions on, Bing UET, Meta pixel, LinkedIn Insight, Clarity, HubSpot, Lead Forensics, Didomi consent with Consent Mode v2 (CA); CallRail, 7 Ads accounts, ~25 GA4 properties, 137 tags (US)	Google Ads AW-18472921801, conversion linker, lead conversion, website-call tracking. No GA4, no UET, no Meta	GTM-T4S4D7 · GTM-5W69BTJQ
Funnel events wired	Yes (24 GA4 event tags in the US container)	Site pushes form_start, lead_form_error, phone_click, email_click, quote_cta_click; the container has no trigger for any of them	tracking-spec.md, container decode
Click-ID persistence	90 days, first and last touch, consent-gated	Current session only	afl-wc-utm plugin · attribution.ts
Lead-type routing	Franchise vs cleaning split at the form, separate thank-you pages	One lead type; one thank-you page	How We Quote
Paid landing page, mobile Lighthouse	jan-pro.ca Toronto West: 65 (LCP 2.6 s, TBT 4,050 ms, 1.9 MB, 44 scripts); jan-pro.com home: 95	/lp/office-cleaning/: 64–75 across five runs, LCP 3.6 s, TBT 0.8–1.3 s, 498 KiB (one low run gave 50 / 7.1 s); homepage 53–68. The stable fact is 1.1–1.3 s of blocking time from the Google tags	Browserless Lighthouse 13.5
Main-thread cost of the tag stack on the LP	not measured	~1.5 s of 2.6 s: gtag 787 ms + gtm.js 628 ms + call tracking 114 ms	same
Required form fields on the paid page	6 (US); HubSpot form (CA)	8 + 8 service checkboxes + visible reCAPTCHA checkbox	page source
Reply promise	"within 24 business hours" (CA)	"within 2 hours" (office and quote LPs); "as soon as possible" (post-construction)	page copy

What the evidence says

- The conversion path itself is sound, verified on 28 Oct with a test submission intercepted in the browser and never sent: exactly one lead_form_submission after a 2xx, one Ads conversion request, the POST carrying gclid, UTMs and first-touch values, the honeypot discarding silently, and a failed validation firing only lead_form_error. Jan-Pro counts client-side form submits and thank-you views (US) or HubSpot callbacks (CA), so its conversion counts are not comparable with Evergreen's server-confirmed leads. The container (version 4) is byte-for-byte what was decoded on 15 Oct; the five funnel events were all observed in the dataLayer and ignored.
- Campaign status is the first question for the client: paused, out of budget, or disapproved. The creatives' format (rating, distance and hours placeholders, a "Book" button) suggests a Smart or Business Profile campaign rather than a standard search campaign, which would also explain the vague headline. The last-served copy, "Toronto's

fastest growing janitorial office cleaning service provider" under the headline "Commercial Maintenance Service", is an unsubstantiated superlative that the 15 Oct blueprint excludes and that Google can disapprove.

- The paid pages themselves are built correctly: noindex,nofollow with a self-canonical, stripped header, sticky Call + Quote bar, offer with fine print, click-ID capture into the lead record. They are let down by the 8-field form restored on 22 Oct and by the Google tags, which cost more main-thread time than the whole page.
- Speed-to-lead is Evergreen's real paid differentiator: a 2-hour reply and a direct account executive versus Jan-Pro's 24 business hours and a franchise hand-off. It should be the headline, and it must be true (intake A6).
- Without GA4 there is no organic funnel and no way to compare paid and organic leads by page (Cloudflare Web Analytics is injected for browser visitors, so page views and referrers exist in the Cloudflare dashboard, but no events). Without triggers for the five events already pushed, the form-start-to-lead rate on each ad group is unknowable. The lead-outcome columns (migration 0009) have been live in Neon since 17 Oct, but nobody records outcomes and no offline-conversion upload runs, so Smart Bidding still optimises toward form fills including spam.
- JAN-PRO Canada is running cleaning-demand Meta ads in Canada now, in English and French, with new creatives started 2 Oct and 23 Oct 2026 ("Imagine never having to think about cleaning again…"), alongside the US franchise-recruitment ads. Evergreen has no Meta pixel and was not found in the Meta library.
- The brandcdn script on jan-pro.com is not call tracking; it is a commented-out connected-TV pixel for one US franchise. Jan-Pro's call attribution is CallRail (US) and Google forwarding numbers (CA).
- One capture of the Canadian SERPs on 28 Oct showed text ads from Stratus Clean, Bark and Emerald Caretakers; a second capture showed none. Signed-out headless sessions are not a reliable ad observatory in either direction. No Evergreen or Jan-Pro ad appeared in any session; use the Ads auction-insights report once access exists.
- The Google tag's automatic form detection sends form_start and form_submit to Google Ads on every attempt, including the honeypot hit and the failed validation. If the Ads account has an auto-created or suggested "form_submit" conversion, it is counting junk alongside the real lead conversion. Check and remove it before relaunch. A successful submission confirms in place and never navigates to /thank-you/, so a destination-URL conversion would record zero; lead_form_submission is the only valid signal.
- Remarketing beacons and 90-day click cookies are set on every page with no consent mechanism or Consent Mode, and the privacy page still describes WordPress comment cookies and never mentions Google Ads, call forwarding, reCAPTCHA or attribution storage. jan-pro.ca runs Didomi with Consent Mode v2 and enhanced conversions on (from a Canadian vantage point its Didomi layer auto-granted every purpose with no banner, so copy the mechanism, not the policy); Evergreen's enhanced conversions are off. Worse: the Google tag's automatic user-provided data collection is on, so a SHA-256 hash of the email typed into the quote form is sent to Google on every submit attempt, including attempts that fail validation and never become a lead, with no disclosure anywhere. Switch it off in the Google tag settings until the privacy position is settled.
- Small tracking defects: the homepage form reports the legacy form_id "contact-form-1384" so reports by form will not match the spec; phone_click reports the tracking provider as "unknown" even though Google's call tracking loaded; the site's attribution store lives in the tab session only, so a return visit from an earlier ad click reaches Neon without its gclid while Google's own cookie keeps it for 90 days. The staging host is publicly reachable and loads the live Ads container (the site pushes site_environment: staging, but no blocking trigger exists), and the homepage renders the number as +1 (416) 803-4880 while the call-tracking tag is configured for (416) 803-4880, so the number swap on organic pages is untested.
- The blueprint routes the Janitorial ad group to /lp/office-cleaning/, whose title, eyebrow and H1 never say janitorial; that ad group has weaker message match than the office group. Give it a headline variant.

Course of action for paid (detail in the plan below)

1. Get read access to the Ads account; confirm status, conversion actions set as Primary, counting settings and the search-terms report before spending.

2. Fix measurement before relaunch: GA4 property, GTM triggers for the five events, staging block, Bing UET, weekly lead dispositions in /admin/leads/ and the offline-conversion upload (the 0009 columns and view already exist); fix the homepage form_id (it still reports the legacy contact-form-1384) and the phone_click provider flag.
3. Relaunch with the 15 Oct blueprint: three search campaigns by service intent (office/janitorial, commercial + quote, commercial post-construction — the plain term is residential-dominated), presence-only targeting on the 10 verified cities, approved claims only, negatives for jobs, residential, DIY and franchise. A minimal relaunch could run from day one on the existing pages and claims; it waits for the measurement fixes only so the first month's data is clean. If leads are needed sooner, relaunch first and measure second.
4. Restore the 4-field paid form; cut the tag stack's main-thread cost and re-measure, aiming for mobile Lighthouse 75+. Deferring the container risks the forwarding-number swap on the first tap (recorded on 15 Oct as the advertising owner's call), so test any deferral on the paid pages first.
5. Lead the ads and the landing pages with the 2-hour reply and the account executive; keep the first-month offer with its fine print on recurring campaigns only.
6. Add Bing/Microsoft Ads for B2B office searches once UET is live. Meta: retargeting of form starters first, prospecting only after the pixel and consent exist (Jan-Pro Canada is already prospecting there in two languages). Defend the brand term: a Kelowna company advertises across Canada as "Evergreen Commercial Cleaning".
7. Review cost per qualified lead by ad group monthly, not cost per form fill. Spend, CPCs and volumes are not visible from here and are not estimated.
8. Decide consent and rewrite the privacy page: name Google Ads, call forwarding, reCAPTCHA and attribution storage, and decide whether to add Consent Mode. Today nothing asks and nothing is disclosed. Switch off the Google tag's automatic user-provided data collection now; it hashes typed email addresses to Google before any lead exists. Once the position is decided, move the site's attribution store to 90-day persistence so return visits keep their click id.
9. Give the janitorial ad group its own headline variant of the office landing page, and turn on enhanced conversions once the privacy position is settled.

Course of action

Order: make the funnel measurable, stop the bleeding on conversion, then build proof and content, then expand. Owner: 10XiD, Client, or Both (the client decides or supplies, 10XiD implements). Effort S/M/L. Each row names the number that proves it worked. Several items (GA4, GTM triggers, the staging block, UET, the privacy rewrite, the intake questions) were already flagged on 15 Oct and are listed again because nothing has moved since.

When	Action	Owner	Effort	Impact	Proof it worked
Days 1–30	Get access: Google Ads (read), GTM publish, Search Console, GA4 (or create it), Google Business Profile manager, Cloudflare Web Analytics; pull the last 90 days of leads from Neon (by form and click-id presence) and Cloudflare Web Analytics sessions as the baseline for every later metric	Client	S	High	All five accounts open to 10XiD
Days 1–30	Confirm Ads status (paused, budget, disapproval); check conversion actions are Primary with correct counting and that no auto-created form_submit conversion is counting (the Google tag fires it on honeypot and failed submits too); pull the search-terms report	10XiD	S	High	Written status; conversions verified
Days 1–30	GA4 as one GTM tag (check first whether the old property G-R27QW21PMT from the previous container still exists and holds history); triggers for form_start, phone_click, quote_cta_click, email_click, lead_form_error; staging block; Bing UET	10XiD	M	High	Events visible in GA4 within 48 h

Days 1–30	Start weekly lead dispositions (qualified / quote issued / won) in /admin/leads/ and the offline-conversion upload; add the three Secondary conversion actions in Ads (migration 0009 is already applied)	Both	S	High	First upload accepted by Google Ads
Days 1–30	Decide the quote form with the client: 4 required + optional city, invisible captcha, matching service names, facility size and frequency fields; then send one real test lead marked TEST to exercise the Worker, Neon and the notification email, which nobody has yet done; cut the general contact form to name, email and message	Both	S	High	Form completions ÷ form starts, before vs after
Days 1–30	Remove the chat/video bubble on mobile (or move it clear and fix its close button); cap the 2.5 MB video to on-click	10XiD	S	Med	Mobile transfer < 1 MB; no element over the phone field
Days 1–30	One reply promise everywhere (form, thank-you, ads); confirm the 2-hour claim is true and record first-contact time against each lead so it stays defensible	Both	S	Med	Copy consistent on 25 forms and /thank-you/
Days 1–30	Technical quick fixes: security headers, /search/ noindex and out of sitemap, pagination out of sitemap, lastmod, 307→301, titles over 60 chars, BreadcrumbList on 7 templates; request indexing of the 9 service pages in Search Console (Google still shows pre-rebuild titles)	10XiD	S	Med	Drift diff clean; Search Console shows no errors
Days 1–30	Entity fix: alternateName "Evergreen Cleaning Service", foundingDate 1989, ImageObject logo, GBP-pin geo, hasMap, contactPoint; visible "formerly" line; rename social handles; link the contact page map to the GBP listing, not the street pin; one name on the Contact heading, logo alt, thank-you title and social bios	Both	S	High	One name in schema, site, GBP, socials
Days 1–30	GBP: confirm 243 Queen St W is staffed (else convert to service-area); fix the hours (Google shows Tue 7 a.m.–6 p.m., the site says Mon–Fri 7am–10pm); set the website link to https://www with a UTM and the booking link to /request-a-quote/; add the services list, the secondary category "Commercial cleaning service", 20+ photos, first posts; reply to all reviews	Both	S	High	Profile complete; reply rate 100%
Days 1–30	Start the review programme: ask at day 30 and after praised one-off jobs; link from invoices and the thank-you page; target 20 reviews by day 90, then 30	Client	S	High	4–6 new Google reviews a month
Days 31–60	Rebuild /reviews/ from the real Google reviews (no aggregateRating); named, dated reviews beside every form; company names on testimonials with permission	Both	M	High	Reviews visible on 25 form pages
Days 31–60	Half-day photoshoot: crews, van, real sites; replace AI-looking imagery, OG images and the gallery; transparent logo	Client	M	High	0 AI-looking images on money pages
Days 31–60	Rebuild /about-us/: owner and account executive named, WSIB/insurance evidence, 1989 story, team photo	Both	M	High	About page > 600 words with people
Days 31–60	Client supplies QA routine and a guarantee (intake B1, B2); publish a named inspection cadence and re-clean promise on process, service and paid pages	Both	M	High	Guarantee live; used in ad copy
Days 31–60	Citations cleanup: Chamber of Commerce, Canadian Business Directory, Fyple (2), MapQuest, WhatsYourHours; claim Yelp, HomeStars, BBB, Bing Places, Apple Maps; resolve the "Evergreen Cleaning Services" (.org) confusion	10XiD	M	Med	0 listings with old name or address
Days 31–60	Relaunch Google Ads per the 15 Oct blueprint: 3 search campaigns by intent, presence-only on 10 cities, approved claims, negatives; lead with the 2-hour reply	10XiD	M	High	Cost per qualified lead by ad group
Days 31–60	Paid-page speed: defer gtag until interaction on /lp/* or move call tracking into GTM; re-measure	10XiD	S	Med	LP mobile Lighthouse ≥ 75

Days 31–60	Blog triage: 7 COVID posts → one guide with 301s; remove the competitor link; visible dates, a real dateModified and a named author on all posts (today every post's dateModified equals its datePublished and the sitemap has no lastmod, so an in-place refresh is invisible to crawlers); link every post to a service page; merge duplicates to ~22 posts (check Search Console clicks first); move About, Contact, Reviews and the posts off the legacy sidebar template and give the hub one name	10XiD	M	Med	0 posts without a service link; 0 undated
Days 61–90	Cost guide "Office cleaning cost in Toronto" with client-approved ranges (A7); price-guidance block on service pages	Both	M	High	Ranks for cost queries; form starts from the page
Days 61–90	New service pages: floor stripping & waxing, day porter, commercial carpet, window (confirm scope); retitle the commercial pillar "Commercial Cleaning & Janitorial Services"	10XiD	L	High	Impressions per page in Search Console
Days 61–90	New industry pages: warehouses/logistics, retail, schools/daycares; dental-only split from medical	10XiD	L	High	Industry pages 5 → 9; impressions
Days 61–90	Location pages: enrich Toronto (rename from toronto-downtown), Mississauga, Vaughan to ≥ 60% unique with travel time, districts, facility mix, local FAQs; hold or merge Brampton, Markham, Oakville, Etobicoke until Search Console and Ads city data justify them	Both	L	Med	Unique-text ratio ≥ 60%; impressions per city
Days 61–90	Publish the first case study (warehouse floor) through the existing approval gate; collect two more	Client	M	High	/projects/ live with 1–3 studies
Days 61–90	Comparison content: "Franchise vs local commercial cleaning company in Toronto" (no trademark in URL or title; sourced matrix; legal glance)	10XiD	M	Med	Ranks for franchise-vs-local queries
Ongoing	2 posts a month tied to service pages; two GBP posts a week recycled from them, photos monthly, review replies within 48 hours; quarterly re-verification of competitor facts	Both	M	Med	Publishing cadence held
Ongoing	Authority: ISSA Canada, BOMA Toronto, Board of Trade or BIA memberships; supplier (Armstrong) and client links; curated-list placements (ThreeBestRated, HomeStars)	Both	M	Med	Referring domains (once a tool is available)
Ongoing	Toronto-geolocated rank grid monthly; drift diff after every deploy (baseline captured 28 Oct); PSI re-run with an API key after each release	10XiD	S	Med	No regressions; CWV in Search Console green
Ongoing	Weekly 15-minute lead review: qualified / unqualified with reason by form_id and campaign; feed negatives and copy	Client	S	High	Qualified-lead rate by source

Not recommended now: French pages; service × city pages in year one; a "Jan-Pro alternatives" roundup or a head-to-head "Evergreen vs JAN-PRO" page; more location pages before the existing seven pass the uniqueness gate; FAQPage investment beyond what exists; llms.txt beyond 30 minutes of effort.

Open questions

Nothing below could be measured from outside the accounts. Each one changes a recommendation above.

Access (blocks measurement)

- ☐ Google Ads read access: is the account paused, out of budget or disapproved since 17 Sep? Are the two conversion actions Primary, is any auto-created form_submit conversion counting, and what does the search-terms report show?
- ☐ GTM publish rights for GTM-5W69BTJQ
- ☐ Search Console: indexing, queries by page and city, field Core Web Vitals

- ☐ GA4: create it, or confirm it exists elsewhere
- ☐ Google Business Profile manager access
- ☐ Who records lead outcomes each week in /admin/leads/ (the 0009 columns are live since 17 Oct; nothing is written to them yet)
- ☐ A PageSpeed Insights API key, so lab numbers can be re-run publicly

Decisions for the client

- ☐ Quote form: accept 4 required fields plus optional city, or keep the 8 restored on 22 Oct? What drove the revert?
- ☐ Business name: "Evergreen Office Cleaning" everywhere, with "formerly Evergreen Cleaning Service"? Rename social handles?
- ☐ Is 243 Queen St W a staffed premises, or a shared office (GBP shows "Floor 1 · Green Offices Toronto Inc.")?
- ☐ Permission to show the live Google rating and count, and company names on testimonials
- ☐ Price ranges the client will stand behind on indexable pages (today "from $30/hr" is paid-only)
- ☐ Does the 2-hour reply promise hold for every enquiry, or only paid recurring campaigns?
- ☐ A guarantee and an inspection routine (frequency, checklist, fix time) to publish
- ☐ Owner and account executive names and bios for the About page
- ☐ Provenance of current photos and the video presenter; a date for a photoshoot
- ☐ Residential work: yes or no (decides a negative-keyword theme)
- ☐ Window and carpet cleaning scope: does Evergreen do them commercially (the paid blueprint lists residential carpet and window as out of scope), and interior and storefront only, or high-rise? Needed before either page is built
- ☐ Which GTA cities are most profitable, and does the business still travel to Durham and Halton?
- ☐ Are the three homepage testimonials (Brenda Carmichael, Allen Robinson, Paul Lockheart) genuine and approved?
- ☐ Does Evergreen offer daytime on-site porter staff? Nothing on the site says so; the day-porter page is gated on this
- ☐ Floor stripping and waxing: per-square-foot pricing basis and minimum job, if any (the only competitor publishing ranges shows $0.40–$0.80/sq ft, $350 minimum)
- ☐ Consent position: will the site ask before setting ad cookies, may the Google tag hash typed email addresses, and who rewrites the privacy page?
- ☐ Is 416-281-4328 still a live company line, and which of the two Facebook pages (104007224426820 or 100063505417254) is the live one?
- ☐ How many hours a week can the client give to review requests and profile posts?

Checks to run by hand (blocked from this environment)

- ☐ Toronto-geolocated local pack and organic positions for the 10 head terms
- ☐ AI answers: ask ChatGPT, Perplexity, Copilot and Google AI Mode for office cleaning companies in Toronto and record who is named
- ☐ Google Rich Results Test on the schema recommendations before shipping
- ☐ Domain authority (Moz, Ahrefs or a free Open PageRank key) for both domains
- ☐ Meta Ad Library for Evergreen; Microsoft and LinkedIn ad libraries for both
- ☐ Whether Cloudflare's bot settings treat verified AI crawlers differently from the imitated ones tested here

- ☐ A real-device test of the quote form, including a browser that blocks reCAPTCHA (Brave shields, uBlock), to confirm every buyer can submit

---

Sources

All pages were opened on 27–28 Oct 2026. Search results came from a US-origin search tool and are not personalised to Toronto. Jan-Pro's own figures are quoted as shown and were not verified. Google SERP and Maps observations come from headless sessions on 28 Oct 2026 with location undetermined and will not reproduce exactly for another viewer; Lighthouse figures are single Browserless 13.5 runs; the repository was read at commit 7c96e9b. Full audit files, 60 screenshots, raw HTML and the drift baseline are in the 10XiD audit folder handed over with this report.
